Macromolecules H.G. Elias, 2013-10-20 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions **Handbook of Polymer**

Synthesis Hans R. Kricheldorf, Oskar Nuyken, Graham Swift, 2004-11-27 An in depth review of important preparative methods for the synthesis and chemical modification of polymers this authoritative second edition examines the advantages and limitations of various polymerization applications and procedures It features new approaches and innovative strategies from the most prominent industry and academic laboratories *The Polysiloxanes* James E. Woody, 2012-03-27 This book provides an introduction to the important methods of chiroptical spectroscopy in general and circular dichroism CD in particular which are increasingly important in all areas of chemistry biochemistry and structural biology The book can be used as a text for undergraduate and graduate students and as a reference for researchers in academia and industry Experimental methods and instrumentation are described with topics ranging from the most widely used methods electronic and vibrational CD to frontier areas such as nonlinear spectroscopy and photoelectron CD as well as the theory of chiroptical methods and techniques for simulating chiroptical properties Applications of chiroptical spectroscopy to problems in organic stereochemistry inorganic stereochemistry and biochemistry and structural biology are also discussed and each chapter is written by one or more leading authorities with extensive experience in the field *Macromolecules* H.G. Elias, 2013-11-11

The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of

macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions *Textbook of Polymer Science* Fred W. Billmeyer, 1984-03-21 This Third Edition of the classic best selling polymer science textbook surveys theory and practice of all major phases of polymer science engineering and technology including polymerization solution theory fractionation and molecular weight measurement solid state properties structure property relationships and the preparation fabrication and properties of commercially important plastics fibers and elastomers **Electron Paramagnetic Resonance** Bruce Gilbert, Damien M Murphy, Victor Chechik, 2014-09-30 The topics covered in this series describe contrasting types of Electron Paramagnetic Resonance EPR application with results being set into the context of earlier work and presented as a set of critical yet coherent overviews Photochemistry Angelo Albini, Elisa Fasani, 2014-09-30 As a scientific discipline photochemistry generates more than 1200 articles and reviews a year across a range of fields Keeping up with the literature can be difficult but Specialist Periodical Reports present an informed view of the latest thinking and research in the field The latest and 42nd volume in the series has a special emphasis on organic and computational aspects of photochemistry drawn from the literature published in 2012 and 2013 Several chapters are devoted to comprehensive and critical reviews of various organic compounds and functional groups One chapter is devoted to photoclick chemistry another on continuous flow photochemical reactions New methods for excited state energies and properties are also examined as are new approaches to singlet oxygen photosensitisation in biological media and functions containing a heteroatom different from oxygen Photochemistry provides essential reading for anyone wishing to keep up to date with the literature or gain a broad appreciation of the field
