Macrophage As Therapeutic Target:

The Macrophage as Therapeutic Target Siamon Gordon, 2012-12-06 During the past decade the rapid growth of molecular and cellular knowledge of macrophages as a specialized host defense and homeostatic system has begun to offer attractive targets for therapeutic intervention Macrophages play a central role in a wide range of disease processes from genetically determined lysosomal storage diseases to acute sepsis chronic inflammation and repair tissue injury and cell death Under or overactivity of macrophage clearance immune effector functions and responses to metabolic abnormalities contribute to common disorders such as autoimmunity atherosclerosis Alzheimer s disease and major infections including AIDS and Tuberculosis Whilst the goals of therapeutic intervention based on improved understanding of macrophage functions and their contribution to pathogenesis may seem self evident there are considerable difficulties in producing useful new agents The present volume covers a range of subjects and provides opportunities for a more focused macrophage targeted approach The individual chapters review selected topics briefly to place cellular processes and molecular targets in perspective Overall the volume should provide a broad sample of the state of the art Useful reviews and references in the literature are cited within individual chapters

Macrophage Activation Khalid Hussain Bhat, 2020-03-25 Macrophages are the sentinels of the immune system whose role has evolved beyond providing aseptic conditions to homeostasis immune regulation development and behaviour These cells have varied ontogenetic origins which reflects in their phenotypic and functional heterogeneity Macrophage functions are fine tuned by exogenous and endogenous signals and once tweaked the information is included in their genetic makeup albeit not indefinitely Subversion of the macrophage functions is the hallmark of many pathogenic organisms and modulation of macrophage activity is pivotal to many therapeutic strategies Fascinating and rapid developments in this field have necessitated the maintenance of currency of knowledge This book provides a current account of information on varied topics in macrophage biology Literature surveys have been presented in a captivating and lucid language The contributing authors have also provided brief accounts of their own research Every chapter provides a future perspective of what more could be achieved in the context of the current knowledge The book will be of interest to students and researchers in microbiology immunobiology translational research pathology and related fields

Emerging Molecular Signaling Pathways and Therapeutic Targets in the Genitourinary Immune Microenvironment Zhangqun Ye, Yin Sun, Guohua Zeng, Zhibing Zhang, Jianxing Li, Dongwen Wang, 2023-12-29 It is well known that the immune microenvironment is critical to the progression of genitourinary malignancies and benign diseases A variety of cellular and molecular properties of the immune microenvironment may influence disease outcome by altering the balance of suppressive versus inflammatory or

cytotoxic responses Emerging evidence suggests that immunoediting is a key factor of phenotypic change immunological alterations caused by physical activity or drug treatments could promote antitumor or anti inflammatory activity Conversely microenvironment deficits or dysregulation can instigate or worsen pathological progression thereby contributing to urinary disease development and progression Thus understanding how immune microenvironments react and maintain appropriate antitumor or anti inflammatory responses is important for identifying actionable therapies to improve genitourinary health Recent technological developments particularly in the areas of genetic modification and redox indicators provide hopeful new treatments not only in urinary cancer kidney cancer bladder cancer relatively rare adrenocortical cancer and penile cancer but also in begin diseases like kidney stones and kidney injuries The purpose of this topic is to provide up to date reviews and original articles that highlight research on immunological mediators of tumor progression and inflammatory related genitourinary diseases which we hope will not only integrate our current understanding but crystallize nascent questions that will help move the field forward This research topic aims to inspire novel insights into the immunity mechanisms novel therapeutic targets and effective combinational strategies of urinary immunotherapies

Iron as Therapeutic Targets in Human Diseases Paolo Arosio,Maura Poli,Raffaella Gozzelino,2020-02-11 Iron is an essential element for almost all organisms a cofactor playing a crucial role in a number of vital functions including oxygen transport DNA synthesis and respiration However its ability to exchange electrons renders excess iron potentially toxic since it is capable of catalyzing the formation of highly poisonous free radicals As a consequence iron homeostasis is tightly controlled by sophisticated mechanisms that have been partially elucidated Because of its biological importance numerous disorders have been recently linked to the deregulation of iron homeostasis which include not only the typical disorders of iron overload and deficiency but also cancer and neurodegenerative diseases This leads iron metabolism to become an interesting therapeutic target for novel pharmacological treatments against these diseases Several therapies are currently under development for hematological disorders while other are being considered for different pathologies The therapeutic targeting under study includes the hepcidin ferroportin axis for the regulation of systemic iron homeostasis complex cytosolic machineries for the regulation of the intracellular iron status and its association with oxidative damage and reagents exploiting proteins of iron metabolism such as ferritin and transferrin receptor A promising potential target is a recently described form of programmed cell death named ferroptosis in which the role of iron is essential but not completely clarified This Special Issue has the aim to summarize the state of the art and the latest findings published in the iron field as well as to elucidate future directions

Macrophage Targeted Delivery Systems Swati Gupta,Yashwant V. Pathak,2022-02-22 The proposed book is envisioned for

the nascent and entry level researchers who are interested to work in the field of drug delivery and its applications specifically for macrophage targeting Macrophages have gained substantial attention as therapeutic targets for drug delivery considering their major role in health and regulation of diseases Macrophage targeted therapeutics have now added significant value to the lives and quality of life of patients without undue adverse effects in multiple disease settings We anticipate examining and integrating the role of macrophages in the instigation and advancement of various diseases The major focus of the book is on recent advancements in various targeting strategies using delivery systems or nanocarriers followed by application of these nanocarriers for the treatment of macrophage associated disorders Macrophage Targeted Delivery Systems is primarily targeted to Pharmaceutical Industry Academia Medical Pharmaceutical Professionals Undergraduate Post graduate students and Research Scholars Ph D post docs working in the field of medical and pharmaceutical sciences Organ Fibrosis: Pathogenesis, Biomarkers and Therapeutic Targets Henricus A. Exploring Macrophage Roles in Cancer Progression and Therapeutic Targeting Yu Kato,George S. Karagiannis,David Entenberg,2025-05-21 Macrophages are a pivotal component of the immune system known for their versatility and essential roles in development tissue repair and immune responses In the context of cancer macrophages exhibit dual roles they can contribute to antitumor immunity or conversely promote tumor progression and metastasis Tumor associated macrophages TAMs within the primary tumor microenvironment are known to facilitate tumor malignancy while metastasis associated macrophages MAMs aid in tumor cell survival and dissemination to distant organs Despite the approval of immune checkpoint inhibitors for various

cancer types refractory cancers remain a significant challenge highlighting the need for novel therapeutic strategies Recent studies have underscored the importance of targeting macrophages and their associated molecules as potential anticancer and antimetastatic therapies However a comprehensive understanding of macrophage biology in cancer initiation and metastasis is still lacking necessitating further investigation into their roles and therapeutic potential This research topic aims to elucidate the roles of macrophages in tumor initiation and metastasis with a focus on exploring their potential as therapeutic targets By investigating the complex interactions between macrophages and cancer cells this research seeks to address the unmet needs in refractory cancers and develop innovative strategies for cancer prevention and treatment Key questions include how macrophages contribute to cancer progression and how their biology can be modulated to inhibit tumor growth and metastasis

Novel Therapeutic Targets and Emerging Treatments for Fibrosis Chrishan S. Samuel,Timothy D. Hewitson,2018-01-12 For decades we have known that the overgrowth hardening and scarring of tissues so called fibrosis represents the final common pathway and best histological predictor of disease progression in most organs Fibrosis is the culmination of both excess extracellular matrix deposition due to ongoing or severe injury and a failure to regenerate An inadequate wound repair process ultimately results in organ failure through a loss of function and is therefore a major cause of morbidity and mortality in disease affecting both multiple and individual organs Whilst the pathology of fibrosis and its significance are well understood until recently we have known little about its molecular regulation Current therapies are often indirect and non specific and only slow progression by a matter of months The recent identification of novel therapeutic targets and the development of new treatment strategies based on them offers the exciting prospect of more efficacious therapies to treat this debilitating disorder This Research Topic therefore comprises several up to date mini reviews on currently known and emerging therapeutic targets for fibrosis including the Transforming Growth Factor TGF family epigenetic factors Angiotensin II type 2 AT2 receptors mineralocorticoid receptors adenosine receptors caveolins and the sphingosine kinase sphingosine 1 phosphate and notch signaling pathways In each case mechanistic insights into how each of these factors contribute to regulating fibrosis progression are described along with how they can be targeted by existing drugs small molecules or other mimetics to prevent and or reverse fibrosis and its contribution to tissue dysfunction and failure Two additional reviews will discuss various anti fibrotic therapies that have demonstrated efficacy at the experimental level but are not yet clinically approved and the therapeutic potential vs limitations of stem cell based therapies for reducing fibrosis while facilitating tissue repair Finally this Research Topic concludes with a clinical perspective of various anti fibrotic therapies for cardiovascular disease CVD outlining limitations of currently used therapies the pipeline of

Ferrao,Erik W. Thompson,Andreas Behren,Robin L. Anderson,2019-11-01 Cancer cells can change and adapt especially within the host environment a phenomenon known as cancer plasticity Several factors including the immune system can influence and be influenced by cancer plasticity which in turn can impact upon patient responses to treatment As such we currently face several challenges for implementing combination therapies as effective cancer treatment strategies We have compiled a topic with a number of articles that emphasize the various aspects of cancer plasticity describing in particular the important role of the tumor microenvironment As we embark on a new era of precision medicine with multi modal therapies for improving patient outcomes this topic highlights some relevant points for consideration that are pertinent to the incorporation and effective use of new treatments as part of cancer treatment regimens including immune modulating drugs **Mechanisms and Therapy for Cancer Metastasis to the Central Nervous System** Haotian Zhao,David D.
