The Macula Susanne Binder, 2012-12-06 Enormous developments have been made in ophthalmology during the last century Higher precision and newer instrumentation in surgery as well as better examination methods and progress in microbiology have given us access to much more information about the pathological physiology and anatomy that we are confronted with in our various fields of expertise As we have approached a new millennium we decided to capture some of these new ideas and incorporate them into a conference where we could share our work and benefit from each others experiences This book is based on contributions nd presented at the 2 International Conference on Vitreoretinal Diseases which was held in September 2002 in Vienna Austria which focused on the retinal macula The meeting was very fortunate to have the world s most renowned leaders in macular research attend and share their vast experience and expertise as well as their latest research and results This meeting followed the First International Conference on Vitreoretinal Diseases which was held in Vienna Austria in 1998 and focused on retinal transplantation and retinal microsurgery nd After the great success of the 2 International Conference on Vitreoretinal Diseases an overwhelming interest was expressed to gather all these new and innovative ideas that had been developed in a book in order to give colleagues and students access to a valuable collection of the information presented at the meeting This international meeting was administrated by Mrs Tilly and Mr

oligodendrocytes and ependymal cells Even beyond such a role in the central nervous system as model glia Müller cells are adapted to several exciting roles in support of vision They deliver the light stimuli to the photoreceptor cells in the inverted vertebrate retina aid the processing of visual information and are responsible for the homeostatic maintenance of the retinal extracellular milieu In Müller Cells in the Healthy and Diseased Retina aimed not just at neurobiologists but at anyone concerned with retinal degeneration every angle of Müller cells is covered from an introduction to their basic properties through their roles as light cables and shock absorbers to the part they play in diseases and disorders of the eye Once these have all been covered in detail the authors move on to discuss the future direction of research into these small but potent cellular phenomena About the Authors Dr Andreas Reichenbach was born in 1950 in Leipzig Germany He studied medicine and specialized as a physiologist working on the mammalian retina Since 1984 he has focused his efforts and those of a growing number of fellows in his team on Müller cell research He has held a professorship at Leipzig University since 1994 After studying biology Dr Andreas Bringmann 1960 worked in the field of systemic neurophysiology until he was inspired in 1996 by Andreas Reichenbach to research the most interesting cell the Müller cell He is now in the Department of Ophthalmology of the University of Leipzig where he is the head of the Basic Research Laboratory
