Vascular Involvement in Eye Diseases, 2024-01-16 Retinal vessels have embryological anatomical and physiological similarities with coronary and cerebral vessels and many systemic vascular pathologies such as hypertension diabetes and cardiovascular disease affect the retinal vessels from function to structure In addition ocular disorders that constitute major public health problems either directly involve retinal and or choroidal vessels such as age related macular

degeneration and diabetic retinopathy or have vascular factors as risk factors such as myopia or glaucoma Understanding the vascular processes that occur in these diseases could advance our understanding of visual compromise associated with these disorders and possibly their prevention Moreover using the eye as a window to the vascular health of the human body is also of major interest As such many efforts are made to develop technologies that are able to assess in a non invasive way the functional and structural changes of retinal and choroidal vessels and provide biomarkers of ocular and systemic vascular diseases These technologies could be used to assess not only the individual risk for development and progression of vascular disease at both the systemic and ocular level but also the efficacy of various interventions from prevention and medical treatments to surgical and laser procedures

Electrodiagnosis of Retinal Disease Yozo Miyake,2006-03-28 Soon it will be time for me to retire from my position as professor of ophthalmology in the Department of Ophthalmology Nagoya University School of Medicine I have therefore decided to summarize my experience of more than 30 years of studies on the clinical electrophysiology of vision These studies were performed in our department through the hard work and good ideas of many co workers and the chapters of this book cover the rationale and results of our studies Because excellent textbooks on clinical electroretinography already exist my wish is not to write another textbook instead this book is in the form of essays that include my beliefs and philosophy on the clinical electrophysiology of vision As such this book does not include every clinical disease but only those that we have identified or studied in detail In addition to full field electroretinography ERG we developed the techniques and instrumentation to record focal macular ERG more than two decades ago Using these techniques we were able to determine several new physiological properties of the normal macula many new pathophysiological mechanisms of known diseases and some new clinical entities with unique functional properties Fortunately the recent advances of macular surgery and imaging are such that the macular configuration can easily be determined During the process of surgery we have obtained considerable information on the correlation of macular function and macular morphology using focal macular ERGs and optical coherence tomography OCT
