Magellan Moon:

Ultra Amy Johnson, 2016-07-06 Commander Conrad of the US Naval intelligence is dispatched on a top priority mission to Scotland near Moray Firth Two RAF Jets on a routine exercise over the North Sea have crashed near Moray Firth At the same time a weather balloon unknown to some carrying sensitive military information has also crashed near Moray Firth Conrad has to locate the witnesses to both the incidents so that they could be sworn to secrecy The book deals with both a critical RAF crash and visitors from space of great relevance to our times Ultra is a hyper intelligent being who lands with surety in Scotland As Conrad conducts his search he begins to suspect that someone is peddling him to a kind of fin de siècle to search for the impossible Conrad is acutely aware of NASA programmes for alien life on other planets and as a child he had read the exploration of space which painted an optimistic picture of our future expansion into the Universe The stars are not for man was something he had heard recanted often He had heard of UFO encounters and hundred per cent of them were dismissed as nonsense He however had been a great fan of The War of the Worlds despite the fact that SETI the search for Extra Terrestrial Intelligence had discovered nothing remotely resembling intelligence Orson Welles too had dismissed all the hype since the beginning of the 20th century when flying saucers had first been reported and Timothy Good and Nick Pope had provided no new evidence of their existence after the UFO files were declassified Amidst all his ponderings from his witnesses of the crash at both sites that a UFO had caused the crash Conrad soon realises that he too is being hunted by some unknown lethal force that what he was told of the incidents was only one part of an unbelievable story From Washington to London to Edinburgh to Moray Firth the story unfolds when Conrad meets Ultra who with precision accuracy reveals earths past and an unusual cosmic alliance begins to form *The Earth and the Moon* Linda T. Elkins-Tanton, 2006 Compares the Earth equally with other planets to display the similarities and differences between the various orbiting bodies This volume discusses the fundamental aspects of the Earth as a planet It also covers the evolution of the moon in relation to the geological features of the Earth **The Moon** David Schunk, Burton Sharpe, Bonnie L. Cooper, Madhu Thangavelu, 2007-11-27 This extraordinary book details how the Moon could be used as a springboard for Solar System exploration It presents a realistic plan for placing and servicing telescopes on the Moon and highlights the use of the Moon as a base for an early warning system from which to combat threats of near Earth objects A realistic vision of human development and settlement of the Moon over the next one hundred years is presented and the author explains how global living standards for the Earth can be enhanced through the use of lunar based generated solar power From that beginning the people of the Earth would evolve into a spacefaring civilisation *Through the Daemon's Gate* Dean Swinford, 2006 This book tells the story of the early modern astronomer Johannes Kepler s Somnium which has been regarded by science historians and literary critics alike as the first true example of science fiction Kepler began writing his complex and heavily footnoted tale of a fictional Icelandic astronomer as an undergraduate and added to it throughout his life The Somnium fuses

supernatural and scientific models of the cosmos through a satirical defense of Copernicanism that features witches lunar inhabitants and a daemon who speaks in the empirical language of modern science Swinford s looks at the ways that Kepler s *Somnium* is influenced by the cosmic dream a literary genre that enjoyed considerable popularity among medieval authors including Geoffrey Chaucer Dante John of Salisbury Macrobius and Alan of Lille He examines the generic conventions of the cosmic dream also studying the poetic and theological sensibilities underlying the categories of dreams formulated by Macrobius and Artemidorus that were widely used to interpret specific symbols in dreams and to assess their overall reliability Swinford develops a key claim about the form of the *Somnium* as it relates to early science Kepler relies on a genre that is closely connected to a Ptolemaic or earth centered model of the cosmos as a way of explaining and justifying a model of the cosmos that does not posit the same connections between the individual and the divine that are so important for the Ptolemaic model In effect Kepler uses the cosmic dream to describe a universe that cannot lay claim to the same correspondences between an individual s dream and the order of the cosmos understood within the rules of the genre itself To that end Kepler s *Somnium* is the first example of science fiction but the last example of Neoplatonic allegory
