"On Second Thought" and Other Essays in the History of Medicine and Science Owsei Temkin, 2002-01-11 Over the course of a career spanning most of the twentieth century distinguished historian Owsei Temkin has argued passionately for the necessity of chronicling and analyzing the history of medicine The essays presented in this book span Dr Temkin's career bringing together new pieces and many previously unavailable outside the journals in which they were originally published Here the reader will find new thoughts and ideas that deviate from Dr Temkin's earlier beliefs and reflect a lifetime of research into the historical and ethical foundations of modern medicine

Circulation and Governance of Asian Medicine Céline Coderey, Laurent Pordié, 2019-08-29 This book unpacks the organized sets of practices that govern contemporary Asian medicine from production of medications in the lab to their circulation within circuits and networks of all kinds and examines the plurality of actors involved in such governance Chapters analyze the process of industrialization and commercialization of Asian medicine and the ways in which the expansion of the market in Asian medicines has contributed to the inscription of products within a large system of governance greatly dominated by global actors and the biomedical hegemony At the same time the contributors argue that local actors continue to play a major role in reshaping the regulations and their implementation thus complexifying the trajectory of the remedies and their natures Examining in particular the plurality of actors involved in governance and circulation and the converging or conflicting logics actors follow in regard to negotiations and tensions that arise the book brings a unique multi layered contribution to the study of governance and circulation of Asian medicines offering further proof of their fluidity and resilience Filling a significant gap in the market by addressing circulation and governance of Asian medicines in Asian countries including Bangladesh Myanmar and Singapore this book will be of interest to students and scholars in the field of Asian studies Asian culture and society global health Asian medicine and medical anthropology

The Cambridge Companion to Hippocrates Peter E. Pormann, 2018-11-08 Hippocrates is a towering figure in Greek medicine Dubbed the father of medicine he has inspired generations of physicians over millennia in both the East and West Despite this little is known about him and scholars have long debated his relationship to the works attributed to him in the so called Hippocratic Corpus although it is undisputed that many of the works within it represent milestones in the development of Western medicine In this Companion an international team of authors introduces major themes in Hippocratic studies ranging from textual criticism and the Hippocratic question to problems such as aetiology physiology and nosology Emphasis is given to the afterlife of Hippocrates from Late Antiquity to the modern period Hippocrates had as much relevance in the fifth century BC Greek world as in the medieval Islamic world and he remains with us today in both medical and non medical contexts

Sociological Perspectives of Health and Illness Constantinos N. Phellas, 2010-10-12 Medical sociology has evolved from being considered as an unimportant area of enquiry to being regarded as central to the study of private troubles and public issues At present much of what is deemed in

sociology as exciting is advancing or contributing to the field of health. It is appropriate therefore that an edited text is published to specifically examine some of the important themes currently in medical sociology research and writing. This volume documents thinking frameworks and processes that are actively shaping the medical sociology research of today. It covers a wide range of topics ranging from the morality of death and euthanasia to the conflict that exists between different status health care providers. *Sociological Perspectives of Health and Illness* will be of interest to students across a wide range of courses in sociology and the social sciences. Specifically students undertaking undergraduate and postgraduate courses in health studies and health promotion would benefit by reading this textbook. However professionals will also be attracted to the book due to the dissemination of current practises in health promotion issues and practices. *Ancient Medicine* Vivian Nutton, 2023-12-14. The third edition of this magisterial account of medicine in the Greek and Roman worlds written by the foremost expert on the subject has been updated to incorporate the many new discoveries made in the field over the past decade. This revised volume includes discussions of several new or forgotten works by Galen and his contemporaries as well as of new archaeological material. RNA analysis has expanded our understanding of disease in the ancient world; the book explores the consequences of this for sufferers, for example in creating disability. Nutton also expands upon the treatment of pre-Galenic medicine in Greece and Rome. In addition, subtitles and a chronology will make for easier student consultation and the bibliography is substantially revised and updated, providing avenues for future student research. This third edition of *Ancient Medicine* will remain the definitive textbook on the subject for students of medicine in the classical world and the history of medicine and science more broadly, with much to interest scholars in the field as well. **Law and Consent** Karla O'Regan, 2019-06-28. Consent is used in many different social and legal contexts with the pervasive understanding that it is and has always been about autonomy, but has it? Beginning with an overview of consent's role in law today, this book investigates the doctrine's inseparable association with personal autonomy and its effect in producing both idealised and demonised forms of personhood and agency. This prompts a search for alternative understandings of consent. Through an exploration of sexual offences in Antiquity, medical practice in the Middle Ages and the regulation of bodily harm on the present-day sports field, this book demonstrates that in contrast to its common-sense story of autonomy, consent more often operates as an act of submission than as a form of personal freedom or agency. The book explores the implications of this counter-narrative for the law's contemporary uses of consent, arguing that the kind of freedom consent is meant to enact might be foreclosed by the very frame in which we think about autonomy itself. This book will be of interest to scholars of many aspects of law, history and feminism as well as students of criminal law, bioethics and political theory. *Nutrition and Nutritive Soul in Aristotle and Aristotelianism* Giouli Korobili, Roberto Lo Presti, 2020-12-07. This volume is a detailed study of the concept of the nutritive capacity of the soul and its actual manifestation in living bodies: plants, animals, humans. In Aristotle and Aristotelianism, Aristotle's innovative analysis of the nutritive faculty has laid the intellectual foundation for the

increasing appreciation of nutrition as a prerequisite for the maintenance of life and health that can be observed in the history of Greek thought According to Aristotle apart from nutrition the nutritive part of the soul is also responsible for or interacts with many other bodily functions or mechanisms such as digestion growth reproduction sleep and the innate heat After Aristotle these concepts were used and further developed by a great number of Peripatetic philosophers commentators on Aristotle and Arabic thinkers until early modern times This volume is the first of its kind to provide an in depth survey of the development of this rather philosophical concept from Aristotle to early modern thinkers It is of key interest to scholars working on classical medieval and early modern psycho physiological accounts of living things historians and philosophers of science biologists with interests in the history of science and generally students of the history of philosophy and science

The Rhetoric of Medicine Dr Nigel Nicholson, Dr Nathan Selden, 2019-04-16 The Rhetoric of Medicine explores problems that confront medical professionals today by first examining similar problems that confronted physicians in ancient Greece This framework provides illuminating entry points into challenges faced by the practice of medicine enabling readers to understand more clearly their shape and operation in the modern context as well as their possible solutions Topics covered include larger cultural ideas about the body tension between professional values and working for money effective collaboration and competition with alternative healthcare providers restrictions on political involvement that are part of a physician's identity maintaining a space for professional autonomy and judgment mentoring that is effective but not exclusive and physicians recognition of themselves as patients as well as professionals A unique collaboration between a classicist and a neurosurgeon The Rhetoric of Medicine is a call to interrogate the narratives and ideas that shape medical care and to revise and replace those that do not serve patient health

Eating and Being Steven Shapin, 2024-11-20 What we eat who we are and the relationship between the two Eating and Being is a history of Western thinking about food eating knowledge and ourselves In modern thought eating is about what is good for you not about what is good Eating is about health not about

virtue Yet this has not always been the case For a great span of the past from antiquity through about the middle of the eighteenth century one of the most pervasive branches of medicine was known as dietetics prescribing not only what people should eat but also how they should order many aspects of their lives including sleep exercise and emotional management Dietetics did not distinguish between the medical and the moral nor did it acknowledge the difference between what was good for you and what was good Dietetics counseled moderation in all things where moderation was counted as a virtue as well as the way to health But during the nineteenth century nutrition science began to replace the language of traditional dietetics with the vocabulary of proteins fats carbohydrates and calories and the medical and the moral went their separate ways Steven Shapin shows how much depended upon that shift and he also explores the extent to which the sensibilities of dietetics have been lost Throughout this rich history he evokes what it felt like to eat during another historical period and invites us to reflect on what it means to feel about food as we now do Shapin shows how the change from dietetics to nutrition science fundamentally altered how we think about our food and its powers our bodies and our minds Drugs on the Page Matthew James Crawford, Joseph M. Gabriel, 2019-05-15 In the early modern Atlantic World pharmacopoeias official lists of medicaments and medicinal preparations published by municipal national or imperial governments organized the world of healing goods giving rise to new and valuable medical commodities such as cinchona bark guaiacum and ipecac Pharmacopoeias and related texts developed by governments and official medical bodies as a means to standardize therapeutic practice were particularly important to scientific and colonial enterprises They served in part as tools for making sense of encounters with a diversity of peoples places and things provoked by the commercial and colonial expansion of early modern Europe Drugs on the Page explores practices of recording organizing and transmitting information about medicinal substances by artisans colonial officials indigenous peoples and others who unlike European pharmacists and physicians rarely had a recognized role in the production of official texts and medicines Drawing on examples across various national and imperial contexts contributors to this volume offer new and valuable insights into the entangled histories of knowledge resulting from interactions and negotiations between Europeans Africans and Native Americans from 1500 to 1850
