On Silent Wings Adventures In Motorless Flight:

On Silent Wings Don Dwiggins, 1970 *Quest for Flight* Gary B. Fogel, Craig S. Harwood, 2012-10-11 The Wright brothers have long received the lion's share of credit for inventing the airplane. But a California scientist succeeded in flying gliders twenty years before the Wright's powered flights at Kitty Hawk in 1903. *Quest for Flight* reveals the amazing accomplishments of John J. Montgomery, a prolific inventor who piloted the glider he designed in 1883 in the first controlled flights of a heavier than air craft in the Western Hemisphere. Re-examining the history of American aviation, Craig S. Harwood and Gary B. Fogel present the story of human efforts to take to the skies. They show that history's nearly exclusive focus on two brothers resulted from a lengthy public campaign the Wrights waged to profit from their aeroplane patent and create a monopoly in aviation. Countering the aspersions cast on Montgomery and his work, Harwood and Fogel build a solidly documented case for Montgomery's pioneering role in aeronautical innovation. As a scientist researching the laws of flight, Montgomery invented basic methods of aircraft control and stability, refined his theories in aerodynamics over decades of research, and brought widespread attention to aviation by staging public demonstrations of his gliders. After his first flights near San Diego in the 1880s, his pursuit continued through a series of glider designs. These experiments culminated in 1905 with controlled flights in Northern California using tandem wing Montgomery gliders launched from balloons. These flights reached the highest altitudes yet attained, demonstrated the effectiveness of Montgomery's designs, and helped change society's attitude toward what was considered the impossible art of aerial navigation. Inventors and aviators working west of the Mississippi at the turn of the twentieth century have not received the recognition they deserve. Harwood and Fogel place Montgomery's story and his exploits in the broader context of western aviation and science, shedding new light on the reasons that California was the epicenter of the American aviation industry from the very beginning. Why Don't Jumbo Jets Flap Their Wings? David Alexander, 2009-06-02 What do a bumble bee and a 747 jet have in common? It's not a trick question. The fact is they have quite a lot in common. They both have wings. They both fly. And they're both ideally suited to it. They just do it differently. *Why Don't Jumbo Jets Flap Their Wings* offers a fascinating explanation of how nature and human engineers each arrived at powered flight. What emerges is a highly readable account of two very different approaches to solving the same fundamental problems of moving through the air, including lift, thrust, turning, and landing. The book traces the slow and deliberate evolutionary process of animal flight in birds, bats, and insects over millions of years, and compares it to the directed efforts of human beings to create the aircraft over the course of a single century. Among the many questions the book answers: Why are wings necessary for flight? How do different wings fly differently? When did flight evolve in animals? What vision, knowledge, and technology was needed before humans could learn to fly? Why are animals and aircrafts perfectly suited to the kind of flying they do? David E. Alexander first describes the basic properties of wings before launching into the diverse challenges of flight and the concepts of flight, aerodynamics, and control to present an integrated view that shows
