Perinatal Physiology Uwe Stave, 2013-06-29 Living Nature not dull Art Shall plan my ways and rule my heart Cardinal Newman Nature and Art 1868 One of the ineluctable consequences of growth in any field of science is that subjects of inquiry once established tend to give birth to subsubjects and that the subsubjects once established will in time undergo further mitotic division Not so many years ago problems surrounding the ietus and newly born infant lay in a realm almost to be described as a no man s land Obstetricians properly gave major consideration to understanding and learning about processes and disorders concerned with maternal health and safety The welfare of the infant was regarded as of secondary importance Pediatricians on their part hesitated to invade the nursery a sanctum regarded as belonging to the domain of the accoucheur And the pathologist enveloped in the mysteries of life and death in the adult found scant time for the neonate and the placenta

Biochemical Basis of Functional Neuroteratology ,1988-07-01 Biochemical Basis of Functional Neuroteratology *The Functional Roles of Glial Cells in Health and Disease* Rebecca Matsas,Marco Tsacopoulos,2012-12-06 Thirty five years ago when Stephen Kuffler and his colleagues at Harvard initiated a new era of research on the properties and functions of neuroglial cells very few neuro scientists were impressed at the time with the hypothesis that neuroglial cells could have another though more subtle role to play in the nervous system than to provide static support to neurons Today very few neuroscientists are unaware of the fact that multiple interactions

between neurons and glial cells have been described and that they constitute the basis for understanding the function and the pathology of the nervous system. Glial cells outnumber neurons and make up about one half of the bulk of the nervous system. They are divided into two major classes: first the macroglia which include astrocytes and oligodendrocytes in the central nervous system and the Schwann cells in the peripheral nervous system and second the microglial cells. These different classes of glial cells have different functions and contribute in different ways in the development function and the pathology of the nervous system.
