Remember the first time you planted a seed and watched it sprout Or explored how a magnet attracted a nail If these questions bring back memories of joy and wonder then you understand the idea behind inquiry based science an approach to science education that challenges children to ask questions solve problems and develop scientific skills as well as gain knowledge Inquiry based science is based on research and experience both of which confirm that children learn science best when they engage in hands on science activities rather than read from a textbook The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten This easy to read and practical book shows how to bring about the changes recommended in the standards It provides guidelines for planning and implementing an inquiry based science program in any school district The book is divided into three parts Building a Foundation for Change presents a rationale for inquiry based science and

describes how teaching through inquiry supports the way children naturally learn. It concludes with basic guidelines for planning a program. School administrators, teachers, and parents will be especially interested in the second part, *The Nuts and Bolts of Change*. This section describes the five building blocks of an elementary science program: Community and administrative support, A developmentally appropriate curriculum, Opportunities for professional development, Materials support, and Appropriate assessment tools. Together, these five elements provide a working model of how to implement hands-on science. The third part, *Inquiry Centered Science in Practice*, presents profiles of the successful inquiry-based science programs in districts nationwide. These profiles show how the principles of hands-on science can be adapted to different school settings. If you want to improve the way science is taught in the elementary schools in your community, *Science for All Children* is an indispensable resource.

Perspectives Deborah L. Hanuscin, Meredith Park Rogers, 2013. Here's a time-saving way to learn what research tells you about teaching elementary science and applying the findings both inside and outside your classroom. It's a collection of 27 Perspectives columns from *Science and Children*, NSTA's award-winning elementary level journal. The book is organized in six science-specific sections, including general teaching goals, strategies to facilitate learning, student thinking and misconceptions, and your own professional development. The columns are written to make it easy to grasp the material and then use what research tells you about issues of specific interest to K-6 science instruction. Each column starts with a classroom vignette highlighting a particular challenge, from using analogies to blending science and reading instruction to effective ways to ask questions. Provides a synthesis of key research findings, organized as a series of questions and concludes with specific advice you can use right away. This useful compendium is ideal for K-6 teachers as well as science supervisors and preservice elementary science methods professors who want more students to benefit from what research tells us.

Remember the first time you planted a seed and watched it sprout. Or explored how a magnet attracted a nail. If these questions bring back memories of joy and wonder, then you understand the idea behind inquiry-based science, an approach to science education that challenges children to ask questions, solve problems, and develop scientific skills, as well as gain knowledge. Inquiry-based science is based on research and experience, both of which confirm that children learn science best when they engage in hands-on science activities rather than read from a textbook. The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education. They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade, starting in kindergarten. This easy-to-read and practical book shows how to bring about the changes recommended in the standards. It provides
