Science Versus Practice Chemistry In Victorian Britain:

Science Versus Practice Robert Bud, Gerrylynn K. Roberts, 1984 **Science, Time and Space in the Late Nineteenth-Century Periodical Press** James Mussell, 2017-05-15 James Mussell reads nineteenth century scientific debates in light of recent theoretical discussions of scientific writing to propose a new methodology for understanding the periodical press in terms of its movements in time and space That there is no disjunction between text and object is already recognized in science studies Mussell argues however this principle should also be extended to our understanding of print culture within its cultural context He provides historical accounts of scientific controversy documents references to time and space in the periodical press and follows magazines and journals as they circulate through society to shed new light on the dissemination and distribution of periodicals authorship and textual authority and the role of mediation in material culture Well known writers like H G Wells and Arthur Conan Doyle are discovered in new contexts while other authors publishers editors and scientists are discussed for the first time Mussell is persuasive in showing how his methodology increases our understanding of the process of transformation and translation that underpins the production of print and informs current debates about the status of digital publication and the preservation of archival material in electronic forms Adding to the book s usefulness are an extended bibliography and a discussion of recent debates regarding digital publication

Chemical Sciences in the Modern World Seymour H. Mauskopf, 2016-11-11 It would be difficult to overestimate the importance of the chemical sciences to the modern world In the last 150 years they have transformed our physical environment our material culture our manner of living and even our persons and they are continuing to do so in profound ways Yet the detailed and systematic study of the history of the modern chemical sciences has been relatively late in coming This compilation of essays by leading scholars represents the first fruits of modern historical scholarship The essays vary in form and content some represent detailed original research others are cast as synoptic blueprints for future research in major domains of scholarship still others are provocative reflections on the opportunities and challenges facing historians of chemical sciences and industries and their audiences The essays in Part One deal with the experimental generation of new chemical knowledge the nature of theories about chemical knowledge and the reception of new knowledge by the chemical community Part Two is devoted primarily to the development of modern industrial chemistry Part Three is concerned with preserving archives and artifacts owned by public and private institutions with making the history of chemistry accessible to persons interested but not trained in history and with helping both policymakers and the general public to understand the policy issues involving the chemical sciences and industries through the insights provided by historical research Part Four the concluding section discusses future prospects for the history of the chemical sciences addressing questions about methodology audience and new directions for research **Brewing Science, Technology and Print, 1700-1880** James Sumner, 2015-07-28 How did the brewing of beer become a scientific process Sumner explores this question by charting the

theory and practice of the trade in Britain and Ireland during the eighteenth and nineteenth centuries *Scientists and Swindlers* Paul Lucier, 2022-02-03 An insightful account of the early fossil fuel industry the rise of the professional consultant and the nexus between science and money Technology and Culture In this impressively researched highly original work Paul Lucier explains how science became an integral part of American technology and industry in the nineteenth century *Scientists and Swindlers* introduces us to a new service of professionals the consulting scientists Lucier follows these entrepreneurial men of science on their wide ranging commercial engagements from the shores of Nova Scotia to the coast of California and shows how their innovative work fueled the rapid growth of the American coal and oil industries and the rise of American geology and chemistry Along the way he explores the decisive battles over expertise and authority the high stakes court cases over patenting research the intriguing and often humorous exploits of swindlers and the profound ethical challenges of doing science for money Starting with the small surveying businesses of the 1830s and reaching to the origins of applied science in the 1880s Lucier recounts the complex and curious relations that evolved as geologists chemists capitalists and politicians worked to establish scientific research as a legitimate regularly compensated and respected enterprise This sweeping narrative enriches our understanding of how the rocks beneath our feet became invaluable resources for science technology and industry **Basic and Applied Research** David Kaldewey, Désirée Schauz, 2018-04-25 Scientific research in different nations particularly after World War II **From Chemical Philosophy to Theoretical Chemistry** Mary Jo Nye, 1994-03-01 How did chemistry and physics acquire their separate identities and are they on their way to losing them again Mary Jo Nye has written a graceful account of the historical demarcation of chemistry from physics and subsequent reconvergences of the two from Lavoisier and Dalton in the late eighteenth century to Robinson Ingold and Pauling in the mid twentieth century Using the notion of a disciplinary identity analogous to ethnic or national identity Nye develops a theory of the nature of disciplinary structure and change She discusses the distinctive character of chemical language and theories and the role of national styles and traditions in building a scientific discipline Anyone interested in the history of scientific thought will enjoy pondering with her the question of whether chemists of the mid twentieth century suspected chemical explanation had been reduced to physical laws just as Newtonian mechanical philosophers had envisioned in the eighteenth century [The Victorian Palace of Science](#) Edward J. Gillin, 2017-11-09 The Palace of Westminster home to Britain's Houses of Parliament is one of the most studied buildings in the world What is less well known is that while Parliament was primarily a political building when built between 1834 and 1860 it was also a place of scientific activity The construction of Britain's legislature presents an extraordinary story in which politicians and officials laboured to make their new Parliament the most radical modern building of its time by using the very latest scientific knowledge Experimentalists employed the House of Commons as a chemistry laboratory geologists argued over the Palace's stone natural philosophers hung meat around the building to measure air purity and mathematicians schemed to make Parliament

the first public space where every room would have electrically controlled time Through such dramatic projects Edward J Gillin redefines our understanding of the Palace of Westminster and explores the politically troublesome character of Victorian science **Transactions of the Royal Historical Society: Volume 21** Ian W. Lecturing the Victorians Anne B. Rodrick,2024-07-25 We are a much lectured people wrote Robert Spence Watson in 1897 Beginning at mid century cities and towns across England used the popular lecture for purposes ranging from serious education to effervescent entertainment and from regional pride to imperial belonging Over time the popular lecture became the quintessential embodiment of Victorian knowledge based culture which itself ranged from the production of new knowledge in the most elite of learned societies to the consumption of established knowledge in middle class clubs and the hundreds of humble mechanics institutions initially founded to provide scientific instruction to workers What did the average Victorian talk and think about How did the knowledge based culture of lecture and debate enable men and women to demonstrate both civic engagement and cultural competence How does this knowledge based culture and its changing expression give us ways to look at Victorian citizenship long before the extension of the franchise With engaging and accessible prose Anne Rodrick draws from a variety of primary sources to provide fascinating answers to these pertinent questions Based on the analysis of several thousand lectures and debates delivered over more than 50 years this book digs deeply into what those individuals below the most elite levels thought heard debated and claimed as a badge of cultural competence By the turn of the 20th century the popular lecture was competing for attention with new institutions of leisure and of higher education and the discourse surrounding its place in contemporary England helps illuminate important debates over access to and deployment of knowledge and culture **Heinrich Caro and the Creation of Modern Chemical**
