Scientific Americans 5vol The New:

Scientific American, 1927 Monthly magazine devoted to topics of general scientific interest The Wheels That Drove New York Roger P. Roess, Gene Sansone, 2012-08-23 The Wheels That Drove New York tells the fascinating story of how a public transportation system helped transform a small trading community on the southern tip of Manhattan island to a world financial capital that is home to more than 8 000 000 people From the earliest days of horse drawn conveyances to the wonders of one of the world's largest and most efficient subways the story links the developing history of the City itself to the growth and development of its public transit system Along the way the key role of played by the inventors builders financiers and managers of the system are highlighted New York began as a fur trading outpost run by the Dutch West India Company established after the discovery and exploration of New York Harbor and its great river by Henry Hudson It was eventually taken over by the British and the magnificent harbor provided for a growing center of trade Trade spurred industry initially those needed to support the shipping industry later spreading to various products for export When DeWitt Clinton built the Erie Canal which linked New York Harbor to the Great Lakes New York became the center of trade for all products moving into and out of the mid west As industry grew New York became a magnet for immigrants seeking refuge in a new land of opportunity The City's population continued to expand Both water and land barriers however forced virtually the entire population to live south of what is now 14th Street Densities grew dangerously and brought both disease and conflict to the poorer quarters of the Five Towns To expand the City needed to conquer land and water barriers primarily with a public transportation system By the time of the Civil War the City was at a breaking point The horse drawn public conveyances that had provided all of the public transportation services since the 1820's needed to be replaced with something more effective and efficient First came the elevated railroads initially powered by steam engines With the invention of electricity and the electric traction motor the elevated's were electrified and a trolley system emerged Finally in 1904 the City opened its first subway From there the City's growth to northern Manhattan and to the outer boroughs of Brooklyn Queens and the Bronx exploded The Wheels That Drove New York takes us through the present day and discusses the many challenges that the transit system has had to face over the years It also traces the conversion of the system from fully private operations through the elevated railways to the fully public system that exists today and the problems that this transformation has created along the way Science and Technology in World History, Volume 3 David Deming, 2014-01-10 This installment in a series on science and technology in world history begins in the fourteenth century explaining the origin and nature of scientific methodology and the relation of science to religion philosophy military history economics and technology Specific topics covered include the Black Death the Little Ice Age the invention of the printing press Martin Luther and the Reformation the birth of modern medicine the Copernican Revolution Galileo Kepler Isaac Newton and the Scientific Revolution **Science and Technology in World History, Volume 4** David Deming, 2016-04-05 The history of science is a story of human

discovery intertwined with religion philosophy economics and technology The fourth in a series this book covers the beginnings of the modern world when 16th century Europeans began to realize that their scientific achievements surpassed those of the Greeks and Romans Western Civilization organized itself around the idea that human technological and moral progress was achievable and desirable Science emerged in 17th century Europe as scholars subordinated reason to empiricism Inspired by the example of physics men like Robert Boyle began the process of changing alchemy into the exact science of chemistry During the 18th century European society became more secular and tolerant Philosophers and economists developed many of the ideas underpinning modern social theories and economic policies As the Industrial Revolution fundamentally transformed the world by increasing productivity people became more affluent better educated and urbanized and the world entered an era of unprecedented prosperity and progress American Artisan ,1867
