

Levels of Scientific Evidence,

with Dr. Kat

Scientific evidence can be confusing! It's easy to mistake weak evidence for strong evidence. Sometimes people share unreliable things on social media with good intentions, but sometimes they're exploiting the public's lack of understanding of different levels of evidence. We all encounter claims online, but **all evidence is not created equal**. So, how can you tell the quality? This infographic can help you find your way.

META-ANALYSIS

Statistical method that combines the results of multiple scientific studies

Example: Connection between intelligence test scores and education

The gold standard for testing health claims. The reviewer does not include experiments but summarizes them. Researchers randomly assign participants to groups to make fair comparisons and test treatments & ways that evidence fits

Example: Does COVID-19 require masks

INTERPRETIVE REVIEW

Synthesis of all data summarized in a meta-analysis. Offers interpretation and context

Example: Evidence synthesis, scores on biomarkers for COVID-19

Example: Framingham Heart Study

CASE-CONTROL STUDY

A study that compares a group of individuals with a specific condition to a group of people without that condition to find out what may have caused it

Example: A study used to determine a link between smoking and lung cancer

Don't forget: Correlation does NOT equal causation

CROSS-SECTIONAL STUDY

A study on one person (or group) at one group (series) of people with similar shared characteristics. Because these studies don't make comparisons, they aren't as strong as the evidence in higher levels of the pyramid

Scientific Evidence With 2002 Supplement:

Scientific Evidence for Musculoskeletal, Bariatric, and Sports Nutrition Ingrid Kohlstadt, 2006-01-26 Nutrition has long been the missing ingredient in the treatment of the various musculoskeletal conditions seen daily by the health professionals. The often stated reason for giving nutrition short shrift is the lack of evidence. Responding to this need, Scientific Evidence for Musculoskeletal Bariatric and Sports Nutrition provides clinicians with

Dietary Supplements Donna Viola Porter, 2003 The use of dietary supplements is often promoted as a solution to a number of nutrition problems including general dietary patterns and nutrient intakes: malnutrition in the elderly, the nutritional needs in pregnant women, poor nutrient intakes in low income children, the iron needs of infants after 6 months, and the prevention of diseases. Although there are situations where the use of vitamin and mineral supplements can improve the health of certain individuals, the consumption of conventional food continues to be the preferred method to improve nutritional and health status. This important book examines many of the issues that dietary supplements face today. One such controversial issue is whether the use of dietary supplements should be included in food stamp plans. Also questioned is the regulation of some of the more controversial dietary supplements such as ephedra and if they should be available as over the counter or rather be made prescription necessary medications.

Contents: Preface, Dietary Supplements, FDA Reform and Codex, Dietary Supplements, Purchase with Food Stamps, Dietary Supplements, Legislative and Regulatory Status, Dietary Supplements, Ephedra, Bibliography

Effects of Herbal Supplements on Clinical Laboratory Test Results Amitava Dasgupta, 2011-05-26 Herbal supplements are available without prescription in many countries throughout the world and accounting for over 30 billion U S dollars in sale. A majority of U S population 25-40% use herbal supplements while alternative medicines are major forms of therapy in third world countries used by as much as 80% population. Contrary to the popular belief that herbal remedies are safe and effective, many herbal supplements have known toxicity and unexpected laboratory test results may be the early indications of such toxicity. In addition, some herbal products such as St John's wort can interact with many Western drugs causing increased clearance of such drugs and hence treatment failure. This monograph would provide information on how herbal supplements affect laboratory test results, thus patient's safety. This monograph would provide a comprehensive and concise practical guide for laboratory professionals, physicians, and other health care professionals. The emphasis of this monograph is to provide clinically relevant information rather than discussing in detail mechanisms of such effect, although brief explanations would be provided for such.
