Water Worlds: Human Geographies of the Ocean Kimberley Peters, 2016-02-11 Our world is a water world Seventy percent of our planet consists of ocean However geography has traditionally overlooked this vital component of the earth's composition The word geography directly translates as earth writing and in line with this definition the discipline has preoccupied itself with the study of terrestrial spaces of society and nature This book challenges human geography's preoccupation with the terrestrial investigating the terra incognita of the seas and oceans Linking to new theoretical debates shaping the geographic discipline such as affect assemblage emotion hybridity and the more than human this volume unlocks new knowledge concerning the human geographies of ocean space The book casts adrift stable bounded and fixed conceptions of space and advances geographical understanding based on the world as becoming changing mobile and processional This ontology supports the notion that the oceans are not simply fluid in a literal way but also in a conceptual sense suggesting that the seas have their own fluid natures their own capacities and

agencies which are co fabricated with social and cultural life This book features twelve chapters authored by key academics contributing to this growing field of research The book is divided into three sections including an Introduction by the editors and a foreword by Prof Philip E Steinberg the leading scholar in the field of maritime geographies The first section of the book considers the ways in which different watery spaces from the Atlantic Ocean to the Mediterranean Sea have been conceptualized theorized and known through metaphors voyages of discovery and scientific endeavour The second section examines how oceans are experienced through various activities including driving on water kayaking in water and diving under water The final section explores the relations between human life and the nature of the sea as a material mobile and more than human spa
