Long Shadows At Noon

Vincent Thomas Murché

Long Shadows At Noon:

Long Shadows at Noon John Marshall, 2002-03-26 Long Shadows at Noon is a short collection of poetry and prose that addresses the richness and tragedies of life. Life has its many rewards that are often overshadowed by the pace at which modern life has captured our minds, time and attention. The shortest and darkest day of the year is the winter solstice that occurs on the 21st of December. This dark period often seems to sneak up on us with little notice or warning and we find ourselves longing for more pleasant times. Often we reflect during the deepest days of darkness on how we let another year slip through our fingertips without enjoying the recently departed summer and autumn. Life is similar. During the dark periods of our lives we often look back at happier times and long for their return. During these dark days of the solstice and of life we must remember that each new day is a little brighter and warmer. Better times are ahead and life is far too sweet not to enjoy. Unlike other poetry books, Long Shadows proceeds each poem with a short essay as to its nature and motivation for being written. Life, death, love and passion are addressed in various styles and forms. Both the simplicities and entanglements of living from a man's perspective are brought forth with an emphasis on taking a truthful and deep exploration of the soul.

A thrilling, ambitious, intense Los Angeles Times novel that explores the attempted assassination of Bob Marley in the late 1970s from the author of *Black Leopard, Red Wolf*. In *A Brief History of Seven Killings*, Marlon James combines brilliant storytelling with his unrivaled skills of characterization and meticulous eye for detail to forge an enthralling novel of dazzling ambition and scope. On December 3, 1976, just before the Jamaican general election and two days before Bob Marley was to play the Smile Jamaica Concert to ease political tensions in Kingston, seven gunmen stormed the singer's house, machine guns blazing. The attack wounded Marley, his wife, and his manager and injured several others. Little was officially released about the gunmen, but much has been whispered, gossiped, and sung about in the streets of West Kingston. Rumors abound regarding the assassins' fates, and there are suspicions that the attack was politically motivated. *A Brief History of Seven Killings* delves deep into that dangerous and unstable time in Jamaica's history and beyond. James deftly chronicles the lives of a host of unforgettable characters: gunmen, drug dealers, one-night stands, CIA agents, even ghosts over the course of thirty years as they roam the streets of 1970s Kingston, dominate the crack houses of 1980s New York, and ultimately reemerge into the radically altered Jamaica of the 1990s. Along the way, they learn that evil does indeed cast long shadows, that justice and retribution are inextricably linked, and that no one can truly escape his fate.

Paul's Cross and the Culture of Persuasion in England, 1520-1640 Torrance Kirby,P.G. (Paul) Stanwood,2013-12-12 The

open air pulpit within the precincts of St Paul's Cathedral known as Paul's Cross can be reckoned among the most influential of all public venues in early modern England. Between 1520 and the early 1640s this pulpit and its auditory constituted a microcosm of the realm and functioned at the epicentre of events which radically transformed England's political and religious identities. Through cultivation of a sophisticated culture of persuasion, sermons at Paul's Cross contributed substantially to the emergence of an early modern public sphere. This collection of 24 essays seeks to situate the institution of this most public of pulpits and to reconstruct a detailed history of some of the more influential sermons preached at Paul's Cross during this formative period. Contributors include Thomas Dabbs, Ellie Gebarowski, Shafer Cecilia Hatt, Roze Hentschell, Anne James, Gerard Kilroy, John N. King, Torrance Kirby, Bradford Littlejohn, Steven May, Natalie Mears, Mary Morrissey, David Neelands, Kathleen O. Leary, Mark Rankin, Angela Ranson, Richard Rex, John Schofield, Jeanne Shami, P. G. Stanwood, Susan Wabuda, John Wall, Ralph Werrell, and Jason Zuidema.

Mapping David Greenwood, 2018-12-01. A praiseworthy introduction to the lore of maps and a mine of information for the amateur map maker. O. M. Miller, American Geographical Society. This book should be welcomed by all students of mapping for it will take them in uncomplicated stages through the complexities of compiling a map. Mr Greenwood is to be congratulated on an excellent book. C. J. Angus, Canadian Geographical Journal. For the baggy and middle aged who cannot afford skiing in Austria or sailing off Bimini, Greenwood invites his readers to a sort of intellectual excitement which neither skiing nor sailing could equal. Unless you work professionally with maps to the degree that a navigator does, for instance, this book will fascinate and enthrall you. Monroe Bush, American Forests. A teacher who wishes to go into the classroom with a storehouse of knowledge and ideas will find this a remarkable book. It is easy to read and each page contains information which can be fed into the work in progress, no matter which area of the world is being studied. Instructor.

Our Place in the Universe Sun Kwok, 2017-04-22. If you have ever wanted to understand the basic principles of astronomy and celestial movements, you should read this book. Using pictures of the sky observed from different places on Earth as well as drawings of ancient astronomical methods and tools, Prof Sun Kwok tells this story in an entertaining and fascinating way. Since the beginning of human civilization, people have wondered about the structure of the cosmos and our place in the Universe. More than 2,000 years ago, our ancestors knew that the seasons were unequal; the Earth was an unattached object floating in space and stars existed that they could not see. From celestial observations, they concluded that the Earth was round. Using simple tools and mathematics, ancient astronomers accurately determined the sizes of the Earth and Moon, the distance to the Moon, and the lengths of the months and year. With a clever device called the armillary sphere, Greek astronomers could predict the times of sunrise and sunset on any day of the year at any place on Earth. They developed sophisticated mathematical models to forecast Mars' motions hundreds of years into the future. Find out how ancient observers achieved these remarkable feats. With minimal use of mathematics, this book retraces the footsteps of our ancestors, explains their intellectual journeys in simple terms, and explores the philosophical implications of these
