Engineering Geology, 2nd Edition Reddy D.V., Engineering Geology is a multidisciplinary subject that interacts with other disciplines such as mineralogy, petrology, structural geology, hydrogeology, seismic engineering, rock engineering, soil mechanics, geophysics, remote sensing, RS, GIS, GPS and environmental geology. This book is the only one of its kind in the Indian market that caters to the students of all these subjects. Engineers require a deep understanding, interpretation and analyses of earth sciences before suggesting engineering designs and remedial measures to combat natural disasters such as earthquakes, volcanoes, landslides, debris flows, tsunamis and floods. This book covers all aspects of engineering geology and is intended to serve as a reference for practicing civil engineers, geotechnical engineers, marine engineers, geologists and mining engineers. Engineering Geology has also been designed as a textbook for students pursuing undergraduate and postgraduate courses in advanced applied geology and earth sciences. A plethora of examples and case studies relevant to the Indian context have been included for better understanding of the geological challenges faced by engineers. New in this Edition: The concept of watershed and the depiction of watershed atlas of India; Latest findings by the Indian Bureau of Mines; Recent developments in coastal engineering and innovative structures; New types of protective structures to guard against tsunamis; Role of geology in building smart cities; Environmental legislation in India

Tunnel Construction Dr. Ashok Kumar Sharma, 2021-02-11 The book describes the details about the tunnel construction that includes history, shape and sizes, various conventional methods, techniques, planning, designing and methodology of construction in Indian context. The geological investigation for the selection of most economical and technically viable alignment for transportation. Further, the book highlights the necessity of safety for men, material and machinery during construction. The Geo technical investigation reports are prepared. Rock is classified in five classes like good rock, poor, fair, poor and very poor according to the strength and characteristics of the rock. The conclusion and recommendation are followed while designing the tunnel with adequately safe and sound tunnel support system. The book emphasises on engaging skilled, experienced and trained workmen, plant and equipment in good service condition which is very important for the completion within stipulated time and cost. The principle of reduce, reuse and recycle is applied in all possible construction activities to minimise the risk to the environment. For ensuring this, the temporary and permanent support system are designed to provide adequate support for the excavated tunnel profile. The Geo technical instrumentation is also provided to continuously monitor the profile, foresee the behaviour of Rock mass so that

preventive steps are taken in time to mitigate the threats posed by fractured rock mass or poor rock Finally it illustrates the various detailed activities and sequences involved at macro level and micro level for the construction of a tunnel
