Indigenous Water and Drought Management in a Changing World Miguel Sioui, 2022-05-19 Indigenous Water and Drought Management in a Changing World presents a series of global case studies that examine how different Indigenous groups are dealing with various water management challenges and finding creative and culturally specific ways of developing solutions to these challenges With contributions from Indigenous and non-Indigenous academics scientists and water management experts this volume provides an overview of key water management challenges specific to Indigenous peoples proposes possible policy solutions both at the international and national levels and outlines culturally relevant tools for assessing vulnerability and building capacity In recent decades global climate change particularly drought has brought about additional water management challenges especially in drought-prone regions where increasing average temperatures and diminishing precipitation are leading to water crises Because their livelihoods are often dependent on the land and water

Indigenous groups native to those regions have direct insights into the localized impacts of global environmental change and are increasingly developing their own adaptation and mitigation strategies and solutions based on local Indigenous knowledge. Many Indigenous groups around the globe are also faced with mounting pressure from extractive industries like mining and forestry which further threaten their water resources. The various cases presented in *Indigenous Water and Drought Management in a Changing World* provide much needed insights into the particular issues faced by Indigenous peoples in preserving their water resources as well as actionable information that can inform future scientific research and policymaking aimed at developing more integrated region specific and culturally relevant solutions to these critical challenges. Includes diverse case studies from around the world. Provides cutting edge perspectives about Indigenous peoples water management issues and IK based solutions. Presents maps for most case studies along with a summary box to conclude each chapter.

**The Handbook of New Zealand Mammals** Carolyn King, David Forsyth, 2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica. It lists 65 species including native and exotic wild and feral living and extinct residents, vagrants and failed introductions. It describes their history, biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources. The description of each species is arranged under standardised headings for easy reference. Because the only native land breeding mammals in New Zealand are bats and seals, the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora. The book details changes in numbers and distribution for the native species and for the arrivals; it summarises changes in habitat, diet, numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers. For this third edition, the text and references have been completely updated and reorganised into Family chapters. The colour section includes 14 pages of artwork showing all the species described and their main variations, plus two pages of maps.

Including 305 maps. This Encyclopedia is not only an interdisciplinary work of reference for all those involved in teaching or researching Arctic issues, but a fascinating and comprehensive resource for residents of the Arctic and all those concerned with global environmental issues, sustainability, science and human interactions with the environment.
