K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The

Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

A Year in the Life of a Third Space Urban Teacher Residency

Monica Taylor, Emily J. Klein, 2015-12-01 This book weaves together voices of faculty residents mentors administrators community organizers and students who have lived together in a third space urban teacher residency program in Newark as they reinvent math and science teaching and teacher education through the lens of inquiry Each chapter includes narratives from multiple perspectives as well as tools we have used within the program to support and build change providing readers with both real cases of how an urban teacher residency can impact school systems and concrete tools and examples to help the reader understand and replicate aspects of the process Capturing both the successes but also the tensions and challenges we offer a kaleidoscopic view of the rich complex and multi layered ways in which multiple stakeholders work together to make enduring educational change in urban schools Our third space NMUTR has been a fragile utopian enterprise one that has relied on a shared commitment of all involved and a deep sense of hope that working collaboratively has the potential even if not perfect to make a difference

Dialogic Education and Technology Rupert Wegerif, 2007-10-13

Dialogic Education and Technology is about using new technology to draw people into the kind of dialogues which take them beyond themselves into learning thinking and creativity The program of research reported in this book reveals key characteristics of learning dialogues and demonstrates ways in which computers and networks can deepen enrich and expand such dialogues A dialogic perspective is developed drawing upon recent work in communications theory psychology computer science and philosophy This perspective foregrounds the creative space opened up by authentic dialogues Whereas studies of computer supported collaborative learning have tended to see dialogue as a means to the end of knowledge construction the dialogic perspective taken by this book sees dialogue as an end in itself in fact moving learners into the space of dialogue is described as the core aim of education The central argument of the book is that there is a convergence between this dialogic perspective in education and the affordances of new information and communications technology A genuinely dialogic perspective is relatively new to the field of educational technology and there is a considerable amount of interest in this topic amongst researchers who wish to see what extra insights if any a dialogical approach can offer them This is an exciting book that synthesizes clarifies and extends mounting discussions of dialogical thinking related to computer supported education It is not only a delightful personal statement but provokes thought on central issues of CSEL and enters into challenging dialog with the relevant alternative approaches As a result of reading this book I am convinced that we urgently need to open new online spaces for people to understandingly interact with different perspectives and creatively generate new insight and respect for difference Gerry Stahl Executive Editor of the International Journal of Computer Supported Collaborative Learning This book offers a set of lenses which give deep insight into education and the use of technologies for learning The moves between empirical studies theoretical reflections and discussion of the design of

learning environments make the book very thought provoking Ideas are not just treated as ideas but they become transformed into principles for design Wegerif is convincing that the use of technology for the creation maintaining and development of dialogical spaces has the potential for transforming and expanding educational experiences in a way which offers a needed vision of learning for the future Sten Ludvigsen Director of the InterMedia Centre for design communication and learning University of Oslo
