A History of Macroeconometric Model-building Ronald G. Bodkin, Lawrence Robert Klein, Kanta Marwah, 1991 This major book presents for the first time an authoritative history of developments in macroeconometric modelling since the 1930s It focuses in particular on the construction of mathematical statistical models of entire economies estimated from national accounts and other macroeconomic data International and comparative in scope the book contains chapters prepared by specialists from the different countries concerned This landmark book is indispensable to an understanding of the history and development of large scale econometric models of modern economies *Challenges for Macroeconomic Modelling* W. Driehuis, M.M.G. Fase, H. den Hartog, 2014-06-28 This book collects the revised and edited proceedings of the conference held in honour of the 50th anniversary of Professor Tinbergen's first macroeconomic policy model Written by experts both in the field of model building and policy analysis the contributions provide an invaluable overview of the state of the art and the use of macroeconomic models in our time

Whitley, 1994 This textbook is a thorough introduction to the theory and practice of macroeconomic modelling It provides a rigorous exposition of the theory of modelling and examines the main UK and European macroeconomic models Policy relevant conclusions are drawn from the models including new areas such as wealth effects and rational expectations The text compares UK macroeconomic models with key US and European models with an emphasis on policy analysis and the ERM

The Econometrics of Macroeconomic Modelling Gunnar Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14 Macroeconometric models in many ways the flagships of the economist's profession in the 1960s came under increasing attack from both theoretical economists and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small

econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies

Macroeconomic Modelling, Economic Policy and Methodology Mikael Randrup Byrialsen, Hamid Raza, Finn Olesen, 2022-10-27 Demonstrating that there are superior alternatives to the modern macroeconomic mainstream and its DSGE dynamic stochastic general equilibrium models this book presents the cutting edge in macroeconomic modelling economic policy and methodology from the perspective of heterodox economic thinking The first part of the book explores methodological issues advocating for a stronger ethical consideration in macroeconomics and for the adoption of a strategy of pluralism to ensure that macroeconomic theory is capable of adapting to real world issues The second part highlights recent trends in empirical Stock Flow Consistent models by collecting a group of the most well developed empirical models of five different economies the Danish the Dutch the French the Italian and the Argentinian models In all five cases the models are used to discuss various policy aspects of the individual economies Finally the book explores issues of macroeconomic policy which are largely neglected by mainstream economists including financial in stability and macro imbalances The book emphasizes the need for investigating sectoral balances which are crucial elements for investigating imbalances from the heterodox perspective This book will be of significant interest to students and scholars of macroeconomics economic modelling economic methodology and heterodox economics more broadly

Dynamic Econometrics For Empirical Macroeconomic Modelling Ragnar Nymoen, 2019-07-09 For Masters and PhD students in Economics In this textbook the duality between the equilibrium concept used in dynamic economic theory and the stationarity of economic variables is explained and used in the presentation of single equations models and system of equations such as VARs recursive models and simultaneous equations models The book also contains chapters on exogeneity in the context of estimation policy analysis and forecasting automatic computer based variable selection and how it can aid in the specification of an empirical macroeconomic model and finally on a common framework for model based economic forecasting Supplementary materials and notes are available on the publisher's website

Market Behaviour and Macroeconomic Modelling Simon Kuipers, Steven Brakman, Hans Van Ees, 1998-11-12 Market Behaviour and Macroeconomic Modelling discusses several state of the art developments in the modelling approach to market behaviour in macroeconomic modelling Leading experts in this field deal with the implications of market imperfections in commodity markets capital markets and labour markets for macroeconomic modelling and stabilization policy They demonstrate that incorporating market imperfections leads to very different policy recommendations than those derived from the standard perfect competition model

Rational Expectations in Macroeconomic Models P. Fisher, 2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London

Mallick, 2018-08-13 First published in 1999 this influential volume explores Macroeconomic Adjustment with a particular focus on India Its inspiration originated from the introduction of stabilisation and structural adjustment policies in India in 1991 Mallick examines the application of this policy package by the International Monetary Fund and the World Bank to Developing Economies First looking at the initial conditions and generators of imbalances the appropriate policy framework for India's initial conditions and structural characteristics is considered While the effectiveness of the IMF had been strongly criticised Mallick explains how it could be used more effectively He argues that the programs applied are often contradictory and using India as an example examines the effects of policy reform on its trade sector the repercussions on the direct economy and the costs associated with such policies in restoring stability and future economic growth with particular support for the Vector Autoregression VAR framework Mallick forwards a new structural model for policy purposes evaluated for overall performance and optimal control Global and National Macroeconometric Modelling Anthony Garratt, Kevin Lee, M. Hashem Pesaran, 2012-03-15 Providing a description of the state of modelling in global and national economies this title introduces an approach to modelling that can readily be adopted for use in understanding how economies work and in generating forecasts for decision makers and policy makers alike **An Empirical Macroeconomic Model for Policy Design** Luis Servén, Andrés Solimano, 1991 **Macroeconomic Modelling in a Changing World** Christopher Allen, Chris Allen, Stephen Hall, 1997-02-12 Macroeconomic Modelling in a Changing World Towards a Common Approach Edited by Chris Allen and Stephen Hall Practical economic model building has changed enormously over the last twenty years Econometrics has become much more sophisticated with the introduction of cointegration and non stationary time series analysis The use of economic theory in the form of complex non linear cross equation restrictions is now much more widespread and the explicit modelling of expectations and credibility effects is more satisfactory This has meant that the old style macroeconomic

models which were complex by virtue of their size alone have been replaced by a generation of new models which embody complex theory and estimation to provide more superior forecasting and policy tools

Macroeconomic Modelling in a Changing World outlines the modelling approach which has been adopted at the Centre for Economic Forecasting at the London Business School one of the world's leading research institutes into macroeconomic modelling in building its own models Using explicit examples and illustrations the authors examine the latest state of the art models and answer questions such as How are modern econometrics used by model builders How should we deal with structural change How should expectations be modelled How are models used in practice

Macroeconomic Modeling Ray C. Fair, 2025-01-21 An empirical approach to constructing macroeconomic models

Macroeconomic Modeling

presents an empirically based approach to the construction of macroeconomic models the Cowles Commission approach as a response to the backlash that has taken place since the late 1970s to this methodology The emphasis in the literature has been on tightly specified theoretical models which lack realism In this book Ray C Fair develops models to analyze a variety of issues and events in macroeconomics and the US economy and he explains the econometric techniques needed to estimate those models Many of the results are either contrary to results from the theoretical models or cannot be examined by the theoretical models because they omit many important features of the economy Fair covers a broad range of topics including inflation and unemployment the size of wealth effects the behavior of the Federal Reserve and its effects on the economy the effects of fiscal policy Okun's law and contractions and expansions Macroeconomic Modeling will appeal equally to graduate students and researchers as well as macroeconomic policy makers
