macroeconomic effects of public capital in industrialized countries The issue of whether public capital is productive has received a great deal of recent attention Yet existing empirical analyses have been limited to a small set of countries This book presents a new database that provides internationally comparable capital stock estimates for 22 OECD countries for the 1960-2001 period Building on this database the book estimates the dynamic effects of public capital using a variety of econometric methods The results suggest that public capital is productive in OECD countries on average The theoretical analysis based on a dynamic general equilibrium model shows that the effects of public capital depend crucially on the way the government chooses to finance additional spending

Zabczyk,2019-10-11 The Fiscal Theory of the Price Level FTPL is the claim that in a popular class of theoretical models the price level is sometimes determined by fiscal policy rather than monetary policy The models where this claim has been established assume that all decisions are made by an infinitely lived representative agent We present an alternative arguably more realistic model populated by sixty two generations of people We calibrate our model to an income profile from U S data and we show that the FTPL breaks down In our model the price level and the real interest rate are indeterminate even when monetary and fiscal policy are both active Our findings challenge established views about what constitutes a good combination of fiscal and monetary policies **Macroeconomic Theory and Stabilization Policy** Willem H. This unique volume will be essential reading for advanced students and researchers across social economics, history of economic thought, economic methodology, political economy and philosophy of social science.

Imperfect Knowledge Economics Roman Frydman, Michael D. Goldberg, 2023-09-26
Posing a major challenge to economic orthodoxy, *Imperfect Knowledge Economics* asserts that exact models of purposeful human behavior are beyond the reach of economic analysis. Roman Frydman and Michael Goldberg argue that the longstanding empirical failures of conventional economic models stem from their futile efforts to make exact predictions about the consequences of rational self-interested behavior. Such predictions based on mechanistic models of human behavior disregard the importance of individual creativity and unforeseeable sociopolitical change. Scientific though these explanations may appear, they usually fail to predict how markets behave. And the authors contend recent behavioral models of the market are no less mechanistic than their conventional counterparts; they aim to generate exact predictions of irrational human behavior. Frydman and Goldberg offer a long overdue response to the shortcomings of conventional economic models. Drawing attention to the inherent limits of economists' knowledge, they introduce a new approach to economic analysis. *Imperfect Knowledge Economics* (IKE) rejects exact quantitative predictions of individual decisions and market outcomes in favor of mathematical models that generate only qualitative predictions of economic change. Using the foreign exchange market as a testing ground for IKE, this book sheds new light on exchange rate and risk premium movements which have confounded conventional models for decades. Offering a fresh way to think about markets and representing a potential turning point in economics, *Imperfect Knowledge Economics* will be essential reading for economists, policymakers and professional investors.

Methodological Foundations of Macroeconomics Alessandro Vercelli, 1991-09-26
This book is an investigation of the methodological and epistemological foundations of macroeconomic theory based on an examination of the theories of Keynes and Lucas. It is divided into two parts. In the first, Professor Vercelli discusses the methodological issues which lie behind the conflict among different schools of thought in macroeconomics: equilibrium and disequilibrium, risk and uncertainty, rationality and causality. These issues are central to the current debate not only in many branches of economics but also in other scientific disciplines. The traditional point of view of science based on equilibrium, stability and determinism has been increasingly challenged by a new point of view in which disequilibrium, instability and uncertainty play a crucial role. This, the author argues, is bound to put macroeconomics in a new, more promising position. In the second part of the book, the author compares the two main alternative research programmes in macroeconomics that outlined by Keynes in his *General Theory* and that suggested by Lucas, the leader of the new classical
