Degradable Polymers G. Scott, 2013-03-14 The emphasis in degradable polymers has changed since the first edition of this book Biomedical and agricultural applications remain important topics of scientific and commercial interest in the second edition However an increased emphasis on composting as a means of recovering value from wastes has led to a new impetus to understand how plastics degrade in the environment and the implication of this for international standards Polymers based on renewable resources are also a major topic in this edition but the debate continues about their long term sustainability and ecological advantages over degradable man made polymers Degradable Polymers will be of interest not only to academic and industrial scientists working on packaging agricultural and medical applications of plastics but also to students of environmental science and legislators concerned with the effects of man made materials in the environment

**Biodegradable polymers for industrial applications** Ray Smith, 2005-05-17 The vast majority of plastic products are made from petroleum based synthetic polymers that do not degrade in a landfill or in a compost like environment Therefore the disposal of these products poses a serious environmental problem An environmentally conscious alternative is to design synthesize polymers that are biodegradable Biodegradable polymers for industrial applications introduces the subject in part one by outlining the classification and development of biodegradable polymers with individual chapters on polyhydroxyalkanoates polyesteramides and thermoplastic starch biodegradable polymers and others The second part explores the materials available for the production of biodegradable polymers Polymers derived from sugars natural fibres renewable forest resources poly lactic acid and protein nanoparticle composites will be looked at in detail in this section Part three looks at the properties and mechanisms of degradation prefacing the subject with a chapter on current standards The final part explores opportunities for industrial applications with chapters on packing agriculture and biodegradable polycaprolactone foams in supercritical carbon dioxide Biodegradable polymers for industrial applications explores the fundamental concepts concerning the development of biodegradable polymers degradable polymers from sustainable sources degradation and properties and industrial applications It is an authoritative book that will be invaluable for academics researchers and policy makers in the industry

Stabilisers for Polyolefins C. Krohnke, F. **Polymers in Agriculture and Horticulture** Roger P. Brown, 2004 Polymers have been used in agriculture and horticulture since the middle of the last century There is a tremendous potential for using polymers in agriculture and our fields and garden would look very different if we did not use polymers in them This review traces the history of polymer use discusses the markets for polymers in these applications and describes in detail the different types of

polymers that can be used and their specific applications An additional indexed section containing several hundred abstracts from the Polymer Library gives useful references for further reading
