Elias, 2013-10-20 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions Macromolecules Hans-Georg Elias, 2013-06-29 Like so many of its kind this textbook originated from the requirements of teaching While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate graduate and postgraduate levels at Swiss Federal Institute of Technology at Zurich 1960 1971 I needed a one volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science This first English edition is based on the third German edition 1975 which is about 40% different from the first German edition 1971 a result of rapid progress in macromolecular science and the less rapid education of the writer This text intends to survey the whole field of macromolecular science Its organization results from the

following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of macro molecules Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before syntheses For example it is difficult to under stand equilibrium polymerization without knowledge of solution thermody of the glass temperature etc Macromolecular Syntheses William J. Bailey,William J.. Bailey,1972 **Macromolecules** H.G. New Methods for Polymer Synthesis W.J. Mijs, 2013-06-29 The art and science of macromolecular architecture is based on synthesis analysis processing and evaluation of physical properties of polymers The growing specificity of available synthetic methods and the increasing refinement of analytical and physical analysis are gradually providing a deeper insight into structure property relationships of polymers upon which many applications can be based This book deals with recent methods for polymer synthesis Those that lead to specific structures have been selected especially Background mechanism scope and limitations and illustrative procedures are given for each method With this

layout the editor hopes that the book will provide a practical guideline for the synthetic polymer chemist in industry or at a university graduate school on how to apply the methods in the design of new polymer structures The editor is grateful to the authors not only for their contributions containing interesting new developments in polymer synthesis but also for the way they have fitted their text into the general framework of the book The elegant chemistry described in the following chapters will it is hoped inspire more organic chemists to apply their skills to polymer synthesis where the beauty of organic chemistry in terms of structural control and reactivity may be even more apparent than in the low molecular field

Nano-Enhanced and Nanostructured Polymer-Based Membranes for Energy Applications Maria Giovanna Buonomenna, 2022-01-22

There is a growing need for better membranes in several emerging application fields especially those related to energy conversion and storage as well as to water treatment and recycling Processability is an important functional property often ignored especially in the early discovery phase for new materials but it should be one of the most important properties that needs to be considered in the development of better membrane materials Useful membrane materials have to be capable of being formed into thin membranes in particular for membrane gas separation water treatment and desalination and then packaged into large area membrane modules All gas separation membranes that are in current commercial use are based on polymers which are solution processable This book intends to deal with composite in most cases hybrid polymer based membranes for three separate application fields energy conversion energy storage and water treatment and recovery Each chapter will explain clearly the various membrane processes then go on to discuss in detail the corresponding advanced membranes used The logic that lies behind this is that you have to understand the process in order to develop new high performance membranes By taking this approach the author aims to overcome the disconnection that currently exists between membrane materials scientists and industrial process engineers Discusses interdisciplinary content by a single author approaching synthesis and development of materials from the perspective of their processability Describes the novel aspects of membrane science that is related to energy storage conversion and wastewater treatment Presents an emphasis on scientific results which have an impact on real applications in terms of renewable and clean energy challenges
