**Maddy, Goal Defence** Meredith Costain, 2005 Eight girls eight books eight points of view The fast paced ALL STARS netball series tells the story of the team s first season **The Philosophy of Penelope Maddy** Sophia Arbeiter, Juliette Kennedy, 2024-10-15 This volume features more than 20 essays that explore the work of one of the most important contemporary philosophers of mathematics It will help readers to better appreciate this significant and prolific philosopher Within philosophy of mathematics Penelope Maddy initially advocated realism She then went on to advance naturalism Both of her positions became very influential in the field along with her other work in the philosophy of logic The contributors comment on and otherwise engage with Maddy s work They also weigh in on the state of set theory and its philosophy the philosophy and history of logic naturalism skepticism and the myriad other areas to which Maddy left her mark Overall coverage traces her influence on these various ideas over the years It will also help readers to better understand how philosophers working at the forefront of these areas see these concepts today These essays will be essential reading for the wide group of philosophers working in these different areas as well as graduate students studying philosophy of mathematics and logic and the other related issues to which Maddy has contributed The volume will also appeal to logicians and set theorists in general as well as to philosophers working in analytic philosophy more widely as well as to those working in the history of philosophy Defending the Axioms Penelope Maddy, 2011-01-27 Mathematics depends on proofs and proofs must begin somewhere from some fundamental assumptions The axioms of set theory have long played this role so the question of how they are properly judged is of central importance Maddy discusses the appropriate methods for such evaluations and the philosophical backdrop that makes them appropriate **God Over All** William Lane Craig, 2016 The book is a defense of God s unique status as the creator of all things apart from himself in the face of the challenge of mathematical Platonism It is based on William Lane Craig s Cadbury Lectures given at the University of Birmingham in March 2015 God and Abstract Objects William Lane Craig, 2017-09-05 This book is an exploration and defense of the coherence of classical theism s doctrine of divine aseity in the face of the challenge posed by Platonism with respect to abstract objects A synoptic work in analytic philosophy of religion the book engages discussions in philosophy of mathematics philosophy of language metaphysics and metaontology It addresses absolute creationism non Platonic realism fictionalism neutralism and alternative logics and semantics among other topics The book offers a helpful taxonomy of the wide range of options available to the classical theist for dealing with the challenge of Platonism It probes in detail the diverse views on the reality of abstract objects and their compatibility with classical theism It contains a most thorough discussion rooted in careful exegesis of the biblical and patristic basis of the doctrine of divine aseity Finally it challenges the influential Quinean metaontological theses concerning the way in which we make ontological commitments Model Theory and the Philosophy of Mathematical Practice John T. Baldwin, 2018-01-25 Major shifts in the field of model theory in the twentieth century have seen the

development of new tools methods and motivations for mathematicians and philosophers In this book John T Baldwin places the revolution in its historical context from the ancient Greeks to the last century argues for local rather than global foundations for mathematics and provides philosophical viewpoints on the importance of modern model theory for both understanding and undertaking mathematical practice The volume also addresses the impact of model theory on contemporary algebraic geometry number theory combinatorics and differential equations This comprehensive and detailed book will interest logicians and mathematicians as well as those working on the history and philosophy of mathematics

**Moral Reasoning in a Pluralistic World** Patricia Marino, 2015-09-01 Moral diversity is a fundamental reality of today's world but moral theorists have difficulty responding to it Some take it as evidence for skepticism the view that there are no moral truths Others associating moral reasoning with the search for overarching principles and unifying values see it as the result of error In the former case moral reasoning is useless since values express individual preferences in the latter our reasoning process is dramatically at odds with our lived experience Moral Reasoning in a Pluralistic World takes a different approach proposing an alternative way of thinking about moral reasoning and progress by showing how diversity and

disagreement are compatible with theorizing and justification Patricia Marino demonstrates that instead of being evidence for skepticism and error moral disagreements often arise because we value things pluralistically This means that although people share multiple values such as fairness honesty loyalty and benevolence we interpret and prioritize those values in various ways Given this pluralistic evaluation process preferences for unified single principle theories are not justified Focusing on finding moral compromises prioritizing conflicting values and judging consistently from one case to another Marino elaborates her ideas in terms of real life dilemmas arguing that the moral complexity and conflict we so often encounter can be part of fruitful and logical moral reflection Aiming to draw new connections and bridge the gap between theoretical ethics and applied ethics *Moral Reasoning in a Pluralistic World* offers a sophisticated set of philosophical arguments on moral reasoning and pluralism with real world applications

**In Quest of the Historical Adam** William Lane Craig, 2021-09-28 Was Adam a real historical person If so who was he and when did he live William Lane Craig sets out to answer these questions through a biblical and scientific investigation He begins with an inquiry into the genre of Genesis 1:1-11 determining that it can most plausibly be classified as mytho history a narrative with both literary and historical value He then moves into the New Testament where he examines references to Adam in the words of Jesus and the writings of Paul ultimately concluding that the entire Bible considers Adam the historical progenitor of the human race a position that must therefore be accepted as a premise for Christians who take seriously the inspired truth of Scripture Working from that foundation of biblical truth Craig embarks upon an interdisciplinary survey of scientific evidence to determine where Adam could be most plausibly located in the evolutionary history of humankind ultimately determining that Adam lived between 750 000 and 1 000 000 years ago as a member of the archaic human species *Homo heidelbergensis* He concludes by reflecting theologically on his findings and asking what all this might mean for us as human beings created in the image of God literally descended from a common ancestor albeit one who lived in the remote past

*Foundations of Mathematics* Andrés Eduardo Caicedo, James Cummings, Peter Koellner, Paul B. *Neo-Aristotelian Perspectives in Metaphysics* Daniel D. Novotný, Lukáš Novák, 2014-04-16 This volume re-examines some of the major themes at the intersection of traditional and contemporary metaphysics The book uses as a point of departure Francisco Suárez's *Metaphysical Disputations* published in 1597 Minimalist metaphysics in empiricist pragmatist clothing have today become mainstream in analytic philosophy Independently of this development the progress of scholarship in ancient and medieval philosophy makes clear that traditional forms of metaphysics have affinities with some of the streams in contemporary analytic metaphysics The book brings together leading contemporary metaphysicians to investigate the viability of a neo-Aristotelian metaphysics

*Australian Book Review*, 2005 *A Debate on God and Morality* William Lane Craig, Erik J. Wielenberg, 2020-07-14 In 2018 William Lane Craig and Erik J Wielenberg participated in a debate at North Carolina State University addressing the question God and Morality What is the best account of objective moral values and duties Craig argued that theism provides a sound foundation for objective morality whereas atheism does not Wielenberg countered that morality can be objective even if there is no God This book includes the full debate as well as endnotes with extended discussions that were not included in the debate It also includes five chapters by other philosophers who have written substantive responses to the debate J P Moreland David Baggett Mark Linville Wes Morriston and Michael Huemer The book provides crucial resources for better understanding moral realism and its dependence on or independence from theistic foundations Key Features A valuable debate about whether or not God is the best explanation for objective morality bringing together theists and atheists working on the same subject who normally are not in conversation with each other Includes clear coverage of ontological and epistemological issues in metaethical theories focusing on Divine Command Theory and Non-natural Robust Moral Realism Engaging and accessible throughout making the book well suited for undergraduate and seminary classrooms

**Gödel, Tarski and the Lure of Natural Language** Juliette Kennedy, 2020-12-17 Is mathematics entangled with its various formalisations Or are the central concepts of mathematics largely insensitive to formalisation or formalism free What is the semantic point of view and how is it implemented in foundational practice Does a given semantic framework always have an implicit syntax Inspired by what she calls the natural language moves of Gödel and Tarski Juliette Kennedy considers what

roles the concepts of entanglement and formalism freeness play in a range of logical settings from computability and set theory to model theory and second order logic to logicity developing an entirely original philosophy of mathematics along the way The treatment is historically logically and set theoretically rich and topics such as naturalism and foundations receive their due but now with a new twist

*The Hyperuniverse Project and Maximality* Carolin Antos, Sy-David Friedman, Radek Honzik, Claudio Ternullo, 2018-01-30 This collection documents the work of the Hyperuniverse Project which is a new approach to set theoretic truth based on justifiable principles and which leads to the resolution of many questions independent from ZFC The contributions give an overview of the program illustrate its mathematical content and implications and also discuss its philosophical assumptions It will thus be of wide appeal among mathematicians and philosophers with an interest in the foundations of set theory The Hyperuniverse Project was supported by the John Templeton Foundation from January 2013 until September 2015

*The Map and the Territory* Shyam Wuppuluri, Francisco Antonio Doria, 2018-02-13 This volume presents essays by pioneering thinkers including Tyler Burge Gregory Chaitin Daniel Dennett Barry Mazur Nicholas Humphrey John Searle and Ian Stewart Together they illuminate the Map Territory Distinction that underlies at the foundation of the scientific method thought and the very reality itself It is imperative to distinguish Map from the Territory while analyzing any subject but we often mistake map for the territory Meaning for the Reference Computational tool for what it computes Representations are handy and tempting that we often end up committing the category error of over marrying the representation with what is represented so much so that the distinction between the former and the latter is lost This error that has its roots in the pedagogy often generates a plethora of paradoxes confusions which hinder the proper understanding of the subject What are wave functions Fields Forces Numbers Sets Classes Operators Functions Alphabets and Sentences Are they a part of our map theory representation Or do they actually belong to the territory Reality Researcher like a cartographer clothes or creates the reality by stitching multitudes of maps that simultaneously co exist A simple apple for example can be analyzed from several viewpoints beginning with evolution and biology all the way down its microscopic quantum mechanical components Is there a reality or a real apple out there apart from these maps How do these various maps interact intermingle with each other to produce a coherent reality that we interact with Or do they not Does our brain uses its own internal maps to facilitate physicist mathematician in us to construct the maps about the external territories in turn If so what is the nature of these internal maps Are there meta maps Evolution definitely fences our perception and thereby our ability to construct maps revealing to us only those aspects beneficial for our survival But the question is to what extent Is there a way out of the metaphorical Platonic cave erected around us by the nature While Map is not the territory as Alfred Korzybski remarked join us in this journey to know more while we inquire on the nature and the reality of the maps which try to map the reality out there The book also includes a foreword by Sir Roger Penrose and an afterword by Dagfinn Føllesdal

*Abstract Objects* José L. Falguera, Concha Martínez-Vidal, 2020-05-08 This volume examines the question Do abstract objects exist presenting new work from contributing authors across different branches of philosophy The introduction overviews philosophical debate which considers what objects qualify as abstract what do we mean by the word exist and indeed what evidence should count in favor or against the thesis that abstract objects exist Through subsequent chapters readers will discover the ubiquity of abstract objects as each philosophical field is considered Given the ubiquitous use of expressions that purportedly refer to abstract objects we think that it is relevant to attend to the controversy between those who want to advocate the existence of abstract objects and those who stand against them Contributions to this volume depict positions and debates that directly or indirectly involve taking one position or other about abstract objects of different kinds and categories The volume provides a variety of samples of how positions for or against abstract objects can be used in different areas of philosophy in relation to different matters

Set Theory Abhijit Dasgupta, 2013-12-11 What is a number What is infinity What is continuity What is order Answers to these fundamental questions obtained by late nineteenth century mathematicians such as Dedekind and Cantor gave birth to set theory This textbook presents classical set theory in an intuitive but concrete manner To allow flexibility of topic selection in courses the book is organized into four relatively independent parts with distinct mathematical flavors Part I begins with the Dedekind Peano axioms and ends with the construction of the real numbers The core Cantor Dedekind theory of cardinals orders and ordinals appears in Part II Part III focuses on the real continuum Finally foundational issues and formal axioms are introduced in Part IV Each part ends with a postscript chapter discussing topics beyond the scope of the main text ranging from philosophical remarks to glimpses into landmark results of modern set theory such as the resolution of Lusin's problems on projective sets using determinacy of infinite games and large cardinals Separating the metamathematical issues into an optional fourth part at the end makes this textbook suitable for students interested in any field of mathematics not just for those planning to specialize in logic or foundations There is enough material in the text for a year-long course at the upper undergraduate level For shorter one semester or one quarter courses a variety of arrangements of topics are possible The book will be a useful resource for both experts working in a relevant or adjacent area and beginners wanting to learn set theory via self study
