 science has mainly been a descriptive science but it is becoming increasingly experimental The space probes that went up
 between the 1960s and 1990s were primarily generalists they collected massive amounts of information so that scientists
 could learn what questions to pursue But recent missions have become more focused Scientists know better what
 information they want and how to collect it Even now probes are on their way to Mercury Venus Mars and Pluto with Europa
 one of Jupiter s moons on the agenda In a sweeping look into the manifold objects inhabiting the depths of space Lives of the
 Planets delves into the mythology and the knowledge humanity has built over the ages Placing our current understanding in
 historical context Richard Corfield explores the seismic shifts in planetary astronomy and probes why we must change our
 perspective of our place in the universe In our era of extraordinary discovery this is the first comprehensive survey of this
