[The Drake Equation](#) Douglas A. Vakoch, Matthew F. Dowd, 2015-07-02 In this compelling book leading scientists and historians explore the Drake Equation which guides modern astrobiology's search for life beyond Earth First used in 1961 as the organising framework for a conference in Green Bank West Virginia it uses seven factors to estimate the number of extraterrestrial civilisations in our galaxy Using the equation primarily as a heuristic device this engaging text examines the astronomical biological and cultural factors that determine the abundance or rarity of life beyond Earth and provides a thematic history of the search for extraterrestrial life Logically structured to analyse each of the factors in turn and offering commentary and critique of the equation as a whole contemporary astrobiological research is placed in a historical context Each factor is explored over two chapters discussing the pre conference thinking and a modern analysis to enable postgraduates and researchers to better assess the assumptions that guide their research

The Greatest Show on Earth Richard Dawkins, 2009-09-22 In 2008 a Gallup poll showed that 44 percent of Americans believed God had created man in his present form within the last 10 000 years In a Pew Forum poll in the same year 42 percent believed that all life on earth has existed in its present form since the beginning of time In 1859 Charles Darwin's masterpiece *On the Origin of Species* shook society to its core Darwin was only too aware of the storm his theory of evolution would provoke But he surely would have raised an incredulous eyebrow at the controversy still raging a century and a half later Evolution is accepted as scientific fact by all reputable scientists and indeed theologians yet millions of people continue to question its veracity Now the author of the iconic work *The God Delusion* takes

them to task The Greatest Show on Earth is a stunning counterattack on advocates of Intelligent Design explaining the evidence for evolution while exposing the absurdities of the creationist argument Dawkins sifts through rich layers of scientific evidence from living examples of natural selection to clues in the fossil record from natural clocks that mark the vast epochs wherein evolution ran its course to the intricacies of developing embryos from plate tectonics to molecular genetics Combining these elements and many more he makes the airtight case that we find ourselves perched on one tiny twig in the midst of a blossoming and flourishing tree of life and it is no accident but the direct consequence of evolution by non random selection The Greatest Show on Earth comes at a critical time systematic opposition to the fact of evolution is menacing as never before In American schools and in schools around the world insidious attempts are made to undermine the status of science in the classroom Dawkins wields a devastating argument against this ignorance but his unjaded passion for the natural world turns what might have been a negative argument into a positive offering to the reader nothing less than a master s vision of life in all its splendor

The Atheist Who Didn't Exist Andy Bannister,2015-07-17 A breath a gust a positive whoosh of fresh air Made me laugh made me think made me cry Adrian Plass In the last decade atheism has leapt from obscurity to the front pages producing best selling books making movies and plastering adverts on the side of buses There s an energy and a confidence to contemporary atheism many people now assume that a godless scepticism is the default position indeed the only position for anybody wishing to appear educated contemporary and urbane Atheism is hip religion is boring Yet when one pokes at popular atheism many of the arguments used to prop it up quickly unravel The Atheist Who Didn t Exist is designed to expose some of the loose threads on the cardigan of atheism tug a little and see what happens Blending humour with serious thought Andy Bannister helps the reader question everything assume nothing and above all recognise lazy scepticism and bad arguments Be an atheist by all means but do be a thought through one **Body**

Heat Mark S. Blumberg,2004-04-15 In this entertaining and illuminating book biopsychologist Blumberg explores the many ways that temperature rules the lives of all animals He moves from the physical principles that govern the flow of heat in and out of our bodies to the many complex evolutionary devices animals use to exploit those principles for their own benefit

Popularizing Science Krishna R. Dronamraju,2017 J B S Haldane 1892 1964 is widely appreciated as one of the greatest and most influential British scientists of the 20th century making significant contributions to genetics physiology biochemistry biometry cosmology and other sciences More remarkable then is the fact that Haldane had no formal qualification in science He made frequent appearances in the media making pronouncements on a variety of poignant topics including mining disasters meteorites politics and the economy and was a popular scientific essay writer Haldane also was famed for conducting painful experiments on himself including several instances in which he permanently injured himself A staunch Marxist and convert to Hinduism Haldane lived a diverse lively and interesting life that is still revered by today s science community A biography of Haldane has not been attempted since 1968 and that book provided an incomplete

account of the man's scientific achievement *The Life and Works of J B S Haldane* serves to fix this glaring omission providing a complete biographical sketch written by Krishna Dronamraju one of the last living men to have worked personally with Haldane A new genre of biographies of 20th century scientists has come into being and thus far works have been written about men like Einstein Oppenheimer Bernal Galton and many more the inclusion of Haldane within this genre is an absolute necessity Dronamraju evaluates Haldane's social and political background as well as his scientific creativity and accomplishments Haldane embodies a generation of intellectuals who believed and promoted knowledge for its own sake and that spirit of scientific curiosity and passion is captured in this biography

Individual-Based Models and Approaches In Ecology D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages sizes and degrees of fitness Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences Individual based models are of great use in the areas of aquatic ecology terrestrial ecology landscape or physiological ecology terrestrial ecology landscape or physiological ecology and agriculture This book discusses which biological problems individual based models can solve as well as the models inherent limitations It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use The book also details specific applications to theory and management

The Dispute of the New World Antonello Gerbi, 2010-06-20 Translated by Jeremy Moyle When Hegel described the Americas as an inferior continent he was repeating a contention that inspired one of the most passionate debates of modern times Originally formulated by the eminent natural scientist Georges Louis Leclerc Comte de Buffon and expanded by the Prussian encyclopedist Cornelius de Pauw this provocative thesis drew heated responses from politicians philosophers publicists and patriots on both sides of the Atlantic The ensuing polemic reached its apex in the latter decades of the eighteenth century and is far from extinct today Translated into English in 1973 *The Dispute of the New World* is the definitive study of this debate Antonello Gerbi scrutinizes each contribution to the debate unravels the complex arguments and reveals their inner motivations As the story of the polemic unfolds moving through many disciplines that include biology economics anthropology theology geophysics and poetry it becomes clear that the subject at issue is nothing less than the totality of the Old World versus the New and how each viewed the other at a vital turning point in history

Writing for Earth Scientists Stephen K. Donovan, 2017-05-08 The time has come You are an Earth scientist You've spent weeks months years working on this project now is the time to pull it together for publication You might be writing an undergraduate or graduate thesis a research paper for a leading journal a note for the newsletter of the local amateur scientific society a book review or an abstract for a specialist geological conference How do you make the transition from promising unpublished researcher to established academic author Of course the phrase academic publishing

covers a multitude of sins monographs research papers book reviews conference abstracts or whatever each requires a different approach You have to decide what it is you are going to write and where to publish it There are co authors supervisors of your degree peer reviewers and editors to deal with on the way But the only way to write like an academic is to write like an academic where do you start You could do much worse than start here There are many books on how to write and be published aimed at research students and other aspiring academics Many of these are readable comprehensive and provide good advice This book is composed of numerous short chapters on this subject all directly relevant to one or more aspects of academic publishing and aimed particularly at the Earth scientists in the broadest sense Geologists will be encouraged to use the book as much as a reference as a reader dipping in to the chapters that contain relevant tips hints and comments to enable them to improve the paper that they are currently writing The book is intended to be informative readable and above all of practical application for all readers In summary the volume will be a readable compilation investigating many facets of academic publishing relevant to the Earth sciences It will be of particular interest to postgraduate students postdocs and new academics

Astronomically Speaking C.C. Gaither, Alma E Cavazos-Gaither, 2003-08-01 To understand the history accomplishments failures and meanings of astronomy requires a knowledge of what has been said about astronomy by philosophers novelists playwrights poets scientists and laymen With this in mind *Astronomically Speaking A Dictionary of Quotations on Astronomy and Physics* serves as a guide to what has been said about

In Search of Our Origins Jamshed Akhtar, 2014-01-19 *In Search of Our Origins* presents new information on the origin of life and man from linguistic analysis of Quran It tells us how the first molecule of life arose on earth what was the mechanism involved where the event occurred and what happened subsequently It also informs us how the first Man and his mate were created where they were nurtured and when and where they appeared on earth

Environmental Adaptation and Eco-cultural Habitats Johannes Schubert, 2015-10-23 In this challenging and highly original book the author tackles the dynamic relationships between physical nature and societies over time It is argued that within each eco cultural habitat the relationship between physical nature and society is mediated by specific entanglements between technologies institutions and cultural values These habitat specific entanglements are neither ecologically nor culturally predetermined but result from mutual adaptation based on variation trial and error and selection It is shown how a variety of eco cultural habitats evolves from this coevolutionary process The book explores how these varieties come into being and how their specific characteristics affect the capacity to cope with environmental or social problems such as flooding or unemployment There are two case studies illustrating the potential of a coevolutionary understanding of the society nature nexus In the first rural and urban settlement structures are conceptualized as distinct paths of eco cultural adaptation It is shown that each of these paths is characterized by predictable spatial correspondences between dwelling technologies modes of social reproduction cultural preferences and related patterns in energy consumption i e social metabolism The second case study deals with flood

protection in liberal and coordinated eco welfare and production regimes drawing on lessons from the Netherlands and Hurricane Katrina in New Orleans As a contribution to theory in environmental sociology the coevolutionary perspective developed provides deeper insights into the intricate interplay between physical and social nature *A Comprehensive, Annotated Bibliography on Mahatma Gandhi* Ananda M. Pandiri, 2007-02-28 Few figures in the twentieth century have been as inspirational as Mohandas Mahatma Gandhi Interest in this extraordinary man has produced a massive amount of printed material making Ananda M Pandiri s comprehensive bibliography an invaluable reference tool for scholars and students Pandiri has meticulously searched printed and electronic indexes publisher s catalogs and university libraries throughout India Britain and the U S to compile a complete bibliography of sources in the English language This volume is organized and cross referenced for easy use and access to a voluminous amount of information Features include More than 4700 entries comprising books pamphlets seminars government records and other significant printed material Complete bibliographic data of sources Annotations detailing the content and scholarship of sources Two exhaustive indexes Title and Subject

Wilhelm Reich, Biologist James E. Strick, 2015-04-01 Wilhelm Reich s experiments in the 1930s with cutting edge light microscopy and time lapse micro cinematography were considered discredited but not because of shoddy lab technique as has been claimed Scientific opposition to Reich s experiments James Strick argues grew out of resistance to his unorthodox sexual theories and Marxist leanings **Science Fact and Science Fiction** Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed **The Big Ideas of Nanoscale Science and Engineering** Shawn Y. Stevens, LeeAnn M. Sutherland, 2009-12 Given the ability of nanoscience and nanotechnology to exploit the unique properties that matter exhibits at the nanoscale the research resulting from these emerging fields is poised to dramatically affect everyday life In fact many widely used electronic pharmaceutical cosmetic and textile products already employ nanotechnology With the support of the National Science Foundation scientists educators

researchers and curriculum developers have achieved a rough consensus on what the key concepts or big ideas of nanoscience might be for middle and high school science students. Size and Scale, Structure of Matter, Forces and Interactions, Quantum Effects, Size Dependent Properties, Self Assembly, Tools and Instrumentation, Models and Simulations, Science Technology and Society. This volume provides in depth discussions of each big idea. Nine additional chapters examine learning goals and how to reach them, students' likely misconceptions and ideas for integrating nanoscale science and engineering with traditional science content. An appreciation of nanoscience will help students understand fundamental science concepts across disciplines. Also learning the enormous implications of the extremely tiny nanoscale phenomenon will pique students' interest in the study of 21st century science and at the same time motivate them to learn traditional science.

Evolution Michael Ruse, Joseph Travis, 2009-02-28. Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history, this book is the most complete, authoritative and inviting one volume introduction to evolutionary biology available. Clear, informative and comprehensive in scope, *Evolution* opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science, from speciation to adaptation, from paleontology to evolutionary development, *evo devo* and concluding with essays on the social and political significance of evolutionary biology today. A second encyclopedic section travels the spectrum of topics in evolution with concise, informative and accessible entries on individuals from Aristotle and Linnaeus to Louis Leakey and Jean Lamarck, from T. H. Huxley and E. O. Wilson to Joseph Felsenstein and Motoo Kimura, and on subjects from altruism and amphibians to evolutionary psychology and Pildown Man to the Scopes trial and social Darwinism. Readers will find the latest word on the history and philosophy of evolution, the nuances of the science itself and the intricate interplay among evolutionary study, religion, philosophy and society. Appearing at the beginning of the Darwin Year of 2009, the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the *Origin of Species*, this volume is a fitting tribute to the science Darwin set in motion.
