

Energy and Change

Grade 7 General Science

Study Guide - Year 8

Renewable and Non-Renewable Sources of Energy

Energy needed to make something work, move, or live. It can be stored or used to make something happen.

Non-Renewable Sources

- Derived from geological resources
- Examples: fossil fuels (oil, natural gas and nuclear fuels (uranium))

Renewable Sources

- Continuously replenished
- Examples: hydroelectric, wind, sunlight, tidal (waves)

Kinetic Energy

Kinetic Energy: Energy a body has when it is moving.

- Examples: faster than moving ball, swift falling, wind blowing, water falling, vehicle moving, current (moving through a circuit)

Potential Energy

Potential Energy: Energy that is stored in a system.

- Examples: stretched rubber band, compressed air in a ball, a ball (battery), fuel, coal, food
- Energy that is stored in a place (J)

Potential and Kinetic Energy in Systems

Two types of energy are involved in:

- Mechanical Systems: Both moving and interacting
- Thermal (Heating) Systems: Energy transferred as heat
- Electrical Systems: Current Energy in a circuit
- Biological Systems: Energy is just used by living organisms

Grade 7 General Science Study Guide - Year 8

Law of Conservation of Energy

The amount is conserved but can be converted from one

and another a system or from one system to another (mechanical system is a prime)

Energy as a Form of Energy

Energy (from a better body to a worse body and back up

Energy between solid objects in direct contact

Energy through the movement of fluids in gases

Energy without physical contact or movement of particles

Conduction

Transfer of heat through the movement of heat liquid or gas particles

- Conduction (contact): Heat is transferred through direct contact or a medium (solid)

Radiation

Transfer of heat without the need for physical contact

- Reflective (ray, direct): Reflected heat
- Absorptive (ray, indirect): Absorbed heat

Grade 7 General Science Study Guide - Year 8

Light and Sound Energy

Light is a form of energy that can travel through a vacuum. Sound is a form of energy that requires a medium to travel.

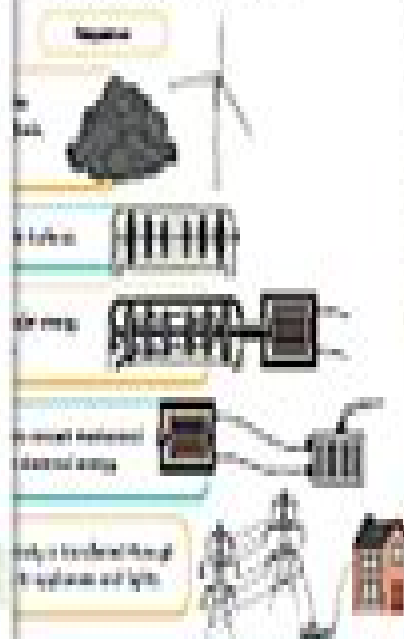

• Light Energy: Energy that travels in the form of waves.

• Sound Energy: Energy that travels in the form of waves, often in the form of sound.

- Examples: Light is a wave (EM), Sound is a wave (ME)

Energy Transfer in the Natural World

Energy transfer in the natural world is a complex process involving many different forms of energy.

Grade 7 General Science Study Guide - Year 8

Energy transfer in the natural world is a complex process involving many different forms of energy.

Energy Transfer in the Human Body

Energy transfer in the human body is a complex process involving many different forms of energy.

Energy transfer in the human body is a complex process involving many different forms of energy.

Energy transfer in the human body is a complex process involving many different forms of energy.

Energy transfer in the human body is a complex process involving many different forms of energy.

Energy transfer in the human body is a complex process involving many different forms of energy.

Sciences Of Energy

**Kirsten R. Daehler, Jennifer
Folsom, Mayumi Shinohara**

Sciences Of Energy:

The Science of Energy Roger G. Newton, 2012 This book aims to describe the scientific concepts of energy Accessible to readers with no scientific education beyond high school chemistry it starts with the basic notion of energy and the fundamental laws that govern it such as conservation and explains the various forms of energy such as electrical chemical and nuclear It then proceeds to describe ways in which energy is stored for very long times in the various fossil fuels petroleum gas coal as well as for short times flywheels pumped storage batteries fuel cells liquid hydrogen The book also discusses the modes of transport of energy especially those of electrical energy via lasers and transmission lines as well as why the latter uses alternating current at high voltages The altered view of energy introduced by quantum mechanics is also discussed as well as how almost all the Earth's energy originates from the Sun Finally the history of the forms of energy in the course of development of the universe is described and how this form changed from pure radiation in the aftermath of the Big Bang to the creation of all the chemical elements in the world

Making Sense of Science: Energy Kirsten R.

Daehler, Jennifer Folsom, Mayumi Shinohara, 2011 This comprehensive professional development course for grades 6-8 science teachers provides all the necessary ingredients for building a scientific way of thinking in teachers and students focusing on science content inquiry and literacy Teachers who participate in this course learn to facilitate hands-on science lessons support evidence-based discussions and develop students' academic language and reading and writing skills in science along with the habits of mind necessary for sense-making and scientific reasoning Energy for Teachers of Grades 6-8 consists of five core sessions Session 1 What is Energy Session 2 Potential Energy Session 3 Heat Energy Session 4 Conservation of Energy Session 5 Energy in Ecosystems The materials include everything needed to effectively lead this course with ease Facilitator Guide with extensive support materials and detailed procedures that allow staff developers to successfully lead a course Teacher Book with teaching science and literacy investigations along with a follow-up component Looking at Student Work designed to support ongoing professional learning communities CD with black-line masters of all handouts and charts to support group discussion and sense-making course participation certificates student work samples and other materials that can be reproduced for use with teachers

Energy Science John Andrews, John G.

Andrews, Nicholas Alfred Jelley, Nick Jelley, 2022 Can climate change be tackled with the current energy technologies and policies available Are renewable energy sources now economically competitive with fossil fuels How much power can be provided by all the various forms of low-carbon energy Energy Science introduces the latest energy technologies explains the physical principles underlying each technology and discusses their environmental economic and social impacts Covering fossil fuels renewables and nuclear energy this book provides you with tools to evaluate the key sources of energy available and introduces potential solutions to the energy problems facing us today New to this edition Greater emphasis on the challenges and urgent actions required in the transition from fossil fuels to low-carbon sources of energy explanations of

recent developments in solar PV off shore wind deploying renewables and battery technology More international case studies looking at real world energy issues and applications of energy technology Increased focus on making the text engaging for a wide range of students with flexible treatment of the more mathematical content Book jacket **Fiscal Year 1991**
