some areas Compared to 2007 the number of papers increased from 6 to 12 in condensed matter physics and from 2 to 5 in high energy physics Bio sciences contributed only one paper in 2007 but four papers in 2009 This indicates that the area of application of supercomputers is continuously growing and entering new elds of research The year 2007 saw two major events of particular importance for the LRZ First after a substantial upgrade with dual core processors the SGI Altix 4700 superc puter reached a peak performance of more than 62 Tera op s And second the n pro t organization Gauss Centre for Supercomputing e V GCS was founded on April 13th

Embedded Cryptographic Hardware Nadia Nedjah, Luiza de Macedo Mourelle, 2005 Data security is an important requirement for almost all if not all information oriented applications such as e commerce digital signature secure Internet etc All these services use encrypted data Cryptography is a milliner science that was the key to the secret of ancient Rome and a fundamental piece in the Second World War Today it is a star in the computation world Several operating systems data base systems or simple filling systems provide the user with cryptographic functions that allow controlled data scrambling Modern cryptology which is the basis of information security techniques started in the late 1970 s and developed in the 1980 s As communication networks were spreading deep into society the need for secure communication greatly promoted cryptographic research The need for fast but secure cryptographic systems is growing bigger Therefore dedicated hardware for cryptography is becoming a key issue for designers With the spread of reconfigurable hardware such as FPGAs hardware implementations of cryptographic algorithms became cost effective The focus of this book is on all aspects of cryptographic hardware and embedded systems This includes design implementation and security of such systems The content of this book is divided into four main parts each of which is organised in three chapters with the exception of the last one

George Mozdzynski, Walter Zwiefelhofer, 2005-09-20 Geosciences and in particular numerical weather prediction are demanding the highest levels of available computer power The European Centre for Medium Range Weather Forecasts with its experience in using supercomputers in this field organizes every other year a workshop bringing together manufacturers computer scientists researchers and operational users to share their experiences and to learn about the latest developments This volume provides an excellent overview of the latest achievements and plans for the use of new parallel techniques in the fields of meteorology climatology and oceanography **Elementary Functions** Jean-Michel Muller, 2006-09-11 An

important topic which is on the boundary between numerical analysis and computer science I found the book well written and containing much interesting material most of the time disseminated in specialized papers published in specialized journals difficult to find Moreover there are very few books on these topics and they are not recent Numerical Algorithms review of the first edition This unique book provides concepts and background necessary to understand and build algorithms for computing the elementary functions The author presents and structures the algorithms hardware oriented as well as software oriented and also discusses issues related to accurate floating point implementation The purpose is not to give cookbook recipes that allow one to implement a given function but rather to provide the reader with tools necessary to build or adapt algorithms to their specific computing environment The expanded second edition contains a number of revisions and additions which incorporate numerous new results obtained during the last few years New algorithms invented since 1997 such as Matula's bipartite method another table based method due to Ercegovic Lang Tisserand and Muller as well as a new chapter on multiple precision arithmetic have been added In addition the section on correct rounding of elementary functions has been fully reworked also in the context of new results Finally the introductory presentation of floating point arithmetic has been expanded with more emphasis given to the use of the fused multiply accumulate instruction The book is an up to date presentation of information needed to understand and accurately use mathematical functions and algorithms in computational work and design Graduates professionals and researchers in scientific computing software engineering and computer engineering will find the book a useful reference and resource **Itanium Rising** Jim Carlson, Jerry Huck, 2003

Carlson covers the development and application of Itanium He describes why the leap forward in processing power can help CEOs achieve their company's vision His book discusses the implication of these changes to a company's IT infrastructure and issues involving how to move away from the desktop model into implementing a system that best makes use of the IPF
