Computing on Supercomputers Matti Vauhkonen, Piet E. Van Camp, 1989 *Scientific Computing on Supercomputers* J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed

during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences. Regrettably, access to supercomputers remains limited for academic researchers. Nonetheless, supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago. It is a pleasure to thank the Belgian National Science Foundation (NFWO-FNRS) for the sponsoring of all the workshops. These workshops are organized in the framework of the Third Cycle Vectorization, Parallel Processing and Supercomputers, which is also funded by the NFWO-FNRS. The other sponsor I want to thank is the University of Antwerp, where the workshops took place. The University of Antwerp, UIA, together with the NFWO-FNRS, are also the main sponsors of the ALPHA project, which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection.

Scientific Computing in Chemical Engineering II Frerich Keil, 1999-05-19. The application of modern methods in numerical mathematics on problems in chemical engineering is essential for designing, analyzing and running chemical processes and even entire plants. Scientific Computing in Chemical Engineering II gives the state of the art from the point of view of numerical mathematicians as well as that of engineers. The present volume, as part of a two-volume edition, covers topics such as computer-aided process design, combustion and flame image processing, optimization, control and neural networks. The volume is aimed at scientists, practitioners and graduate students in chemical engineering, industrial engineering and numerical mathematics.

This book presents the state of the art in parallel numerical algorithms, applications, architectures and system software. The book examines various solutions for issues of concurrency, scale, energy efficiency and programmability, which are discussed in the context of a diverse range of applications. Features include contributions from an international selection of world-class authorities, examines parallel algorithm architecture, interaction through issues of computational capacity, based code design and automatic restructuring of programs using compilation techniques, reviews emerging applications of numerical methods in information retrieval and data mining, discusses the latest issues in dense and sparse matrix computations for modern high-performance systems, multicores, manycores and GPUs, and several perspectives on the Spike family of algorithms for solving linear systems, presents outstanding challenges and developing technologies and puts these in their historical context.

Relativity and Scientific Computing Friedrich W Hehl, Roland A. Puntigam, Hanns Ruder, 2012-12-06 For this set of lectures we assumed that the reader has a reasonable background in physics and some knowledge of general relativity the modern theory of gravity in macrophysics and cosmology Computer methods are presented by leading experts in the three main domains in numerics in computer algebra and in visualization The idea was that each of these subdisciplines is introduced by an extended set of main lectures and that each is conceived as being of comparable importance Therefore we believe that the book represents a good introduction into scientific computing for any student who wants to specialize in relativity gravitation and or astrophysics We took great care to select lecturers who teach in a comprehensible way and who are at the same time at the research front of their respective field In numerics we had the privilege of having a lecturer from the National Center for Supercomputing Applications NCSA Champaign IL USA and some from other leading institutions of the world visualization was taught by a visualization expert from Boeing and in computer algebra we took recourse to practitioners of different computer algebra systems as applied to classical general relativity up to quantum gravity and differential geometry
