Scientific And Religious Belief:

Scientific and Religious Belief P. Weingartner, 2012-12-06 This book provides new insights into the interrelation between scientific and religious belief The chapters cover important features of belief in general and discuss distinctive properties between belief knowledge and acceptance These properties are considered in relation and comparison to religious belief Among the contributions are topics such as the change of scientific belief in relation to the change of our information Is belief value free What are rational reasons for the justification of religious hypotheses What are the important similarities and differences between scientific and religious belief The different features and aspects are discussed in respect to the great religions of mankind In addition to the research papers the book contains selections of the discussion which help to clarify interesting details The book will be of interest to a vast readership among philosophers theologians and people interested in philosophical questions concerning religion

Scientific Theory and Religious Belief Eberhard Herrmann, 1995 Peeters 1995

Science and Religion John Hedley Brooke, 1991-05-31 In this 1991 volume John Hedley Brooke offers an introduction and critical guide to one of the most fascinating and enduring issues in the development of the modern world the relationship between scientific thought and religious belief It is common knowledge that in western societies there have been periods of crisis when new science has threatened established authority The trial of Galileo in 1633 and the uproar caused by Darwin's *Origin of Species* 1859 are two of the most famous examples Taking account of recent scholarship in the history of science Brooke takes a fresh look at these and similar episodes showing that science and religion have been mutually relevant in so rich a variety of ways that no simple generalizations are possible A special feature of the book is that Brooke stands back from general theses affirming conflict or harmony which have so often served partisan interests His object is to reveal the subtlety complexity and diversity of the interaction as it has taken place in the past and in the twentieth century

The Big Questions in Science and Religion Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers

Scientific Explanation and Religious Belief Michael G. Parker, Thomas M. Schmidt, 2005 Contributions from an international conference held December 11-13 2002 at the Institute for Philosophy of Religion at the Johann Wolfgang

Goethe University in Frankfurt Knowledge and Scientific and Religious Belief Paul Weingartner, 2018-09-10 The present book is a book on epistemology with the special and new focus on the relation of different types of knowledge and a differentiated comparison to both scientific and religious belief The present book distinguishes seven types of knowledge and compares them with both scientific and religious belief The usual view is that scientific and religious belief have nothing or not much in common Although there are important differences in contradistinction to this widespread view it is shown that there are also many similarities between them There are similarities concerning the reasons for belief with respect to the action of believing concerning a similar voluntary component or even concerning properties of the content of belief A detailed discussion of many types of knowledge and a differentiated comparison to scientific and religious belief is an important new contribution to the scientific literature in epistemology **Knowledge and Scientific and Religious Belief** Paul Weingartner, 2018 The present book is a study in epistemology that concentrates on knowledge and both scientific and religious belief It aims at clarifying relations between knowledge and both types of belief on the one hand and between scientific and religious belief **The Credibility of Science and Religion** Paul Weingartner, 2025-01-27 Weingartner compares criteria and basic assumptions for the credibility of scientific and religious belief systems It is shown that mankind has access to basic knowledge about a higher spiritual power and knowledge by conscience about what is obligatory or forbidden This is defended by further axiomatizations on basic terms as natural goods natural and moral law and conscience Scientific and religious belief systems are then compared thoroughly and by logical deduction and verisimilitude One main argument is that every kind of belief system has an upper and a lower bound of credibility yet a degree of credibility that leads to the impossibility of rational justification for scientific belief systems must not be required from religious belief systems Further topics are internal and external consistency local refutation mutual complementation between religion and theory of evolution as well as a comparison of the five world religions leading to general features of religion It is shown that one main yet basic axiom of morality is the principle of charity Finally the book concludes with the credibility requirements of science towards religion and those of religion towards science **Can Scientists Believe** Sir Nevill Mott, 2013-11-05 In this collection of thought provoking essays a range of distinguished scientists and theologians men and women young and old all with strong scientific training and deeply held religious beliefs in the Judeo Christian tradition give their personal answers They do not always agree the views of each contributor being informed both by their particular scientific expertise and religious affiliation They address a wide range of problems that will interest all concerned to reconcile their own religious beliefs with currently accepted scientific theory and practice The divergences of opinion are as significant as the agreements Positions are thoughtfully explained and make important often novel and illuminating contributions to debate on these great issues **Science, Belief and Society** Stephen H Jones, Rebecca Catto, Tom Kaden, 2019-05-22 The relationship between science and belief has been a prominent subject of public debate for many years one that has relevance to

everything from science communication health and education to immigration and national values Yet sociological analysis of these subjects remains surprisingly scarce This wide ranging book critically reviews the ways in which religious and non religious belief systems interact with scientific theories and practices Contributors explore how for some secularists science forms an important part of social identity Others examine how many contemporary religious movements justify their beliefs by making a claim upon science Moving beyond the traditional focus on the United States the book shows how debates about science and belief are firmly embedded in political conflict class community and culture

Scientific and Religious Habits of Mind Ron Good,2005 The open inquiring nature of science is fundamentally incompatible with the closed authoritarian nature of most religious training Reasons for rejection of personal god concepts by Charles Darwin Albert Einstein and Bertrand Russell are used by this author to underline this incompatibility and to show how each of these important scientists came to reject organized religion Conflicts between scientific and religious habits of mind are described and ideas for education are offered Common assumptions about our natural environment and human nature are shown to be obstacles to scientific literacy and to a sound liberal education Research on the nature of the relationship between scientific and religious habits of mind is proposed recognizing the potential incompatibilities between these important influences in society

Religion and the Challenges of Science William Sweet,Richard Feist,2007-01-01 Does science pose a challenge to religion and religious belief This volume provides background to the current science and religion debate yet focuses as well on themes where recent discussion of the relation between science and religion has been particularly concentrated

The Justification of Science and the Rationality of Religious Belief Michael C. Banner,1990 In this critical examination of recent accounts of the nature of science and of its justification given by Kuhn Popper Lakatos Laudan and Newton Smith Banner contends that models of scientific rationality which are used in criticism of religious beliefs are in fact often inadequate as accounts of the nature of science He argues that a realist philosophy of science both reflects the character of science and scientific justifications and suggests that religious belief could be given a justification of the same sort

How We Believe, 2nd Edition Michael Shermer,2003-10 Recent polls show that 96% of Americans believe in God Why are people turning to religion in greater numbers than ever before In *How We Believe* Michael Shermer presents the results of an exhaustive empirical study in which he asked 10 000 Americans how and why they believe and about details of their faith The result offers fresh and startling insights into age old questions

Logical Faith Joseph P. Provenzano,Richard W. Kropf,2007-07-30 Science has failed to develop ethical guidelines or a path to personal fulfillment as previously expected Religious differences continue to be a source of friction threatening world peace But now a new more encompassing vision of reality a vision that offers new ways to address these problems is emerging This evolutionary view presented by authors Joseph P Provenzano and Richard W Kropf builds on the findings of modern science but also touches on personal fulfillment and spiritual values In our worldwide computerized information age we have seen an unprecedented clash of moral values

scientific pursuits religions spiritual movements and cultures Provenzano and Kropf explain how it is possible to have a religious faith consistent with the understanding of matter and energy as studied by contemporary science logical faith

Logical Faith Introducing a Scientific View of Spirituality and Religion presents a clear down to earth formulation of an emerging vision Provenzano and Kropf show how their viewpoint can be used as a bridge between science and spirituality and as a base to develop a new path to tolerance among the world's great religions and spiritual movements *Belief in God in an Age of Science* John Polkinghorne, 1998-03-30 John Polkinghorne is a major figure in today's debates over the compatibility of science and religion Internationally known as both a theoretical physicist and a theologian the only ordained member of the Royal Society Polkinghorne brings unique qualifications to his inquiry into the possibilities of believing in God in an age of science In this thought provoking book the author focuses on the collegiality between science and theology contending that these intellectual cousins are both concerned with interpreted experience and with the quest for truth about reality He argues eloquently that scientific and theological inquiries are parallel The book begins with a discussion of what belief in God can mean in our times Polkinghorne explores a new natural theology and emphasizes the importance of moral and aesthetic experience and the human intuition of value and hope In other chapters he compares science's struggle to understand the nature of light with Christian theology's struggle to understand the nature of Christ He addresses the question Does God act in the physical world And he extends his ideas about the role of chaos theory surveys the prospects for future dialogue between scientific and theological thinkers and defends a critical realist understanding of the activities of both disciplines Polkinghorne concludes with a consideration of the nature of mathematical truths and the links between the complementary realities of physical and mental experience Scientific Models for Religious Knowledge Andrew Ralls Woodward, 2018-08-14 Most comparisons of science and religion are really comparisons of science and Christianity or science and Islam and so forth In *Scientific Models for Religious Knowledge* the author aims to get outside typical polarized debates between traditional a priori theism and radical scientistic naturalism Instead a new science and religion compatibility system between a scientific study of religion and a religious epistemology is our new elusive problem Moreover we shall look at a comparison and contrast of modern science with the simple deference of the human mind to the actions of culturally postulated superhuman agents This book pays critical attention to the contributions of scholars in the philosophy of religion the philosophy of science and the scientific study of religion *Scientific Models for Religious Knowledge* is useful for readers looking to expand their learning in the philosophies of science and religion as these subjects are taught and analyzed in modern research universities **Science, Belief and Society** Grace Davie, 2019 This wide ranging book critically reviews the ways in which religious and non religious belief systems interact with scientific methods traditions and theories Moving beyond the traditional focus on the United States the book shows how debates about science and belief are firmly embedded in political conflict class community and culture *The Trend of Scientific Thought Away from Religious Beliefs*

Oliver Horatio Ladd, 1909 **Conjunctive Explanations** Jonah N. Schupbach, David H. Glass, 2023-05-12 Philosophers and psychologists are increasingly investigating the conditions under which multiple explanations are better in conjunction than they are individually This book brings together leading scholars to provide an interdisciplinary and unified discussion of such conjunctive explanations The book starts with an introductory chapter expounding the notion of conjunctive explanation and motivating a multifaceted approach to its study The remaining chapters are divided into three parts Part I includes chapters on The Nature of Conjunctive Explanations Each chapter illustrates distinct ways in which explanatory multiplicity is motivated by a careful study of the nature and concept of explanation The second part Reasoning About Conjunctive Explanations includes chapters on the epistemology and logic of conjunctive explanations Here the contributors propose and evaluate various norms for reasoning correctly about and to conjunctive explanations Part III concerns The Psychology of Conjunctive Explanations with contributions discussing conditions under which humans entertain and hold multiple explanations of single explananda simultaneously and the cognitive limitations and capacities for doing so Conjunctive Explanations will be of interest to researchers and advanced students working on explanation in philosophy of science epistemology philosophical logic and cognitive psychology
