The British National Bibliography Arthur James Wells, 2000 **McGraw-Hill Yearbook of Science & Technology 2004**, 2004 **High Speed Photography and Photonics** Sidney F. Ray, 2002 The development of new technologies in the fields of photonics digital systems and computers has resulted in many exciting innovations in high speed photography HSP and its commercial industrial and military applications This book forms a definitive work on the subject and was written to fill a hitherto uncovered gap in the available literature on this topic Compiled by a leading team of international experts and written with the cooperation of the Association for High Speed Photography AHSP under the Editorship of Sidney F Ray this is the most authoritative work on the subject to date The book forms an introduction to high speed photography principally for those who wish to investigate

its almost limitless potential as a tool for instrumentation measurement and analysis in both research and development work. It will also interest those who are mainly concerned with standard photographic and digital imaging procedures but need to know more about high speed recording. As a university textbook it is ideally suited to those undertaking postgraduate research as well as to undergraduates on courses that include film production, biomedical imaging, scientific photography and applied imaging. The material in the book follows progressively from an introduction to and development of HSP to details of illumination and image capture systems, data extraction and necessary image processing in experimental procedures. Both major and specialist applications of HSP are detailed, including ballistics, the natural world, detonics, the properties of materials and aircraft engineering, combustion processes, motor vehicle safety and holography. A large number of diagrams and photographs illustrate and supplement the text, while tables of data provide easy access to numerical information. Will appeal to newcomers as well as professionals in the topic. Endorsed by the Association for High Speed Photography. Major topics covered in one independent source.
