Hunt, Carl P. Lipo, Sarah L. Sterling, 2001-06-30 Although many believe that archaeological knowledge consists simply of empirical findings this notion is false data are generated with the guidance of theory or some sense making system acting in its place whether researchers recognize this or not Failure to understand the relationship between theory and the empirical world has led to the many debates and frustrations of contemporary archaeology Despite years of trying the atheoretical empiricist foundations of archaeology have left us little but a history of storytelling and unsatisfying generalizations about historical

change and human diversity The present work offers promising directions for building theoretically defensible results by providing well designed case studies that can be used as guides or exemplars Evolutionary theory in at least some form is the foundation for a scientific archaeology that will yield scientific explanations for historical change

Archaeological Theory and Scientific Practice Andrew Jones, 2001-12-06 Is archaeology an art or a science This question has been hotly debated over the last few decades with the rise of archaeological science At the same time archaeologists have seen a change in the intellectual character of their discipline as many writers have adopted approaches influenced by social theory The discipline now encompasses both archaeological scientists and archaeological theorists and discussion regarding the status of archaeology remains polarised In this 2001 book Andrew Jones argues that we need to analyse the practice of archaeology Through an analysis of archaeological practice influenced by recent developments in the field of science studies and with the aid of extensive case studies he develops a new framework which allows the interpretative and methodological components of the discipline to work in tandem His reassessment of the status and character of archaeology will be of interest to students scholars and professionals

Body, Text, and Science M. Sawicki, 2013-12-01 What is scientific about the natural and human sciences Precisely this the legibility of our worlds and the distinctive reading strategies that they provoke That account of the essence of science comes from Edith Stein who as Husserl's assistant 1916-1918 labored in vain to bring his massive *Ideen* to publication and then went on to propose her own solution to the problem of finding a unified foundation for the social and physical sciences Stein argued that human bodily life itself affords direct access to the interplay of natural causality cultural motivation and personal initiative in history and technology She developed this line of approach to the sciences in her early scholarly publications which too soon were overshadowed by her religious lectures and writings and eventually were obscured by National Socialism's ideological attack on philosophies of empathy Today as her church prepares to declare Stein a saint her secular philosophical achievements deserve another look
