Values in Science Education Deborah Corrigan, Cathy Buntting, Angela Fitzgerald, Alister Jones, 2020-05-18 In 2007 the Monash Kings College London International Centre for the Study of Science and Mathematics Curriculum edited a book called *The Re emergence of Values in Science Education* This book reflects on how values have been considered since this original publication particularly in terms of socio cultural economic and political factors that have impacted broadly on science technology and society and more specifically on informal and formal science curricula Hence the title of this book has been framed as *Values in Science Education The shifting sands* As in the first book this collection focuses on values that are centrally associated with science and its teaching and not the more general notion of values such as cooperation or teamwork that are also important values in current curricula Such values have indeed become more of a focus in science education This may be a response to the changing global context where technological changes have been rapid and accelerating In such complex and risky environments it is our guiding principles that become the important mainstays of our decisions and practices In terms of science education what is becoming clearer is that traditional content and traditional science and scientific methods are not enough for science and hence science education to meet such challenges While shifts in values in science education continue tensions remain in curriculum development and implementation as evidenced by the continued diversity of views about what and whose values matter most Connected Science Tricia A.
