Downey,M.R. Fellows,2012-12-06 The idea for this book was conceived over the second bottle of Villa Maria s Caber net Medot 89 at the dinner of the Australasian Combinatorics Conference held at Palmerston North New Zealand in December 1990 where the authors first met and discovered they had a number of interests in common Initially we embarked on a small project to try to formulate reductions to address the apparent parame terized intractability of DOMINATING SET and to

introduce a structure in which to frame our answers Having spent several months trying to get the definitions for the reductions right they now seem so obvious we turned to our tattered copies of Garey and Johnson's work [239] We were stunned to find that virtually none of the classical reductions worked in the parameterized setting We then wondered if we'd be able to find any interesting reductions Several years many more bottles so many papers and reductions later it seemed that we had unwittingly stumbled upon what we believe is a truly central and new area of complexity theory It seemed to us that the material would be of great interest to people working in areas where exact algorithms for a small range of parameters are natural and useful e.g. Molecular Biology VLSI design The tractability theory was rich with distinctive and powerful techniques The intractability theory seemed to have a deep structure and techniques all of its own
