What Is the Influence of the National Science Education Standards?

National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Science Education K-12,Steering Committee on Taking Stock of the National Science Education Standards: The Research,2002-12-05 In 2001 with support from National Science Foundation the National Research Council began a review of the evidence concerning whether or not the National Science Education Standards have had an impact on the science education enterprise to date and if so what that impact has been This publication represents the second phase of a three phase effort by the National Research Council to answer that broad and very important question Phase I began in 1999 and was completed in 2001 with publication of Investigating the Influence of Standards A Framework for Research in Mathematics Science and Technology Education National Research Council 2002 That report provided organizing principles for the design conduct and interpretation of research regarding the influence of national standards The Framework developed in Phase I was used to structure the current review of research that is reported here Phase II began in mid 2001 involved a thorough search and review of the research literature on the influence of the NSES and concludes with this publication which summarizes the proceedings of a workshop conducted on May 10 2002 in Washington DC Phase III will provide input collected in 2002 from science educators administrators at all levels and other practitioners and policy makers regarding their views of the NSES the ways and extent to which the NSES are influencing their work and the systems that support science education and what next steps are needed *Playful STEAM Learning in the Early Years* Amanda

Sullivan, Amanda Strawhacker, Decades of research has shown that introducing STEM content like coding and engineering during the foundational early childhood years can lead to many benefits such as improving children's number sense problem solving skills and sequencing ability. Unfortunately, the costs of STEM technologies can be a barrier for many early childhood educators. Additionally, many digital tools and apps are not playful or developmentally appropriate for young learners and can be less inclusive of students who have been historically excluded from STEM. This book addresses these barriers by demonstrating how to leverage an interdisciplinary STEAM (Science Technology Engineering Arts and Mathematics) approach to pique the curiosity of young students through play-based learning. The authors provide evidence-based hands-on approaches as well as a practical framework to effectively integrate STEAM learning in the early grades, pre-K to third grade. Readers will explore new ways to play alongside their young learners to make powerful STEAM discoveries and foster a lifelong love of learning.

Book Features: Provides tips and strategies rooted in existing frameworks and guidelines as well as the authors' original research on the cognitive and socioemotional benefits of STEAM experiences. Empowers early childhood educators working in any setting, informal, formal, or home settings. Describes a new framework for the equitable design and implementation of play-based STEAM learning in early childhood settings.

Sustainable Development Research Jenny Haberer, 2012 The underlying purpose of this paper is to analyse determining factors of responsible environmental behaviour which serves as a formative evaluation prior to implementation. This comprises the objectives of discussing the project strategy and aims as well as analysing the target audience's individual behaviour and conditioning factors deriving from the external situation that require consideration in the design of the project's implementation strategy. A further implication is to clarify how present theories help to understand factors inhibiting or enabling responsible environmental behaviour and to provide knowledge on communication campaigns and strategy design. The key findings indicate that theory on individual behaviour change from psychology and social studies is vast; however, strategy designers of environmental campaigns do not make sufficient use of it and often develop programmes based on simplistic knowledge-attitude-practice models. On the other hand, literature on external factors determining environmental behaviour is not as advanced. Besides the fact that a change of situational terms and conditions is postulated to yield great results, in general, individual and contextual factors need to be addressed to bring about the desired behaviour change which has been considered in the strategy design of the Solar-powered Schools for Hyderabad project.
