A ($q_A = +1.0 \times 10^{-3} \text{ C}$, $x_A = 0$, $y_A = 0$)

B ($q_B = -2.0 \times 10^{-3} \text{ C}$, $x_B = 10 \text{ cm}$, $y_B = 0$)

C ($q_C = +3.0 \times 10^{-3} \text{ C}$, $x_C = 10 \text{ cm}$, $y_C = 10 \text{ cm}$)

Find the force, F , on each charge exerted by the other two charges.

Excerpt from Questions on General Physics Based on the Tenth Edition of Everett's Translation of Deschanel's Natural Philosophy In making use of these questions as a basis for recitations and lectures the author insists that students must review by themselves if necessary such subjects as are required for entrance to the University Elementary topics are not accordingly discussed in the class room except in so far as they may be necessary to continuity of thought Students are expected to recite upon the subject matter of their text book in so far as indicated by references thereto and to be prepared for examination upon all questions included in the course It is understood that the written examinations are not limited to these questions but only to the topics which they cover These topics constitute none the less a comparatively limited ground upon which accordingly thorough preparation may be expected and required It is thought that other students who desire to review the subject of physics may derive help from writing out the answers to such questions as are treated by Deschanel and comparing their answers with the text book For this reason a few more copies have been printed than were actually required for this and next year a period beyond which the use of this book was not originally contemplated About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

- 1 Show that the sense of touch is closely connected with our ideas of force
- 2 What connection exists in general between force and the muscular effort necessary to produce or to resist it
- 3 Name certain cases in which the maintenance of a force like continued muscular effort requires the continuous expenditure of energy of some sort and where if the source of energy be cut off exhaustion ensues and the force ceases
- 4 What is meant by the fatigue of metals etc under continued strain Would a perfect solid exhibit such effects
- 5 Are we justified in supposing that the maintenance of inanimate forces in general like the maintenance of muscular tension in the absence of a fresh supply of energy necessarily involves fatigue or exhaustion to any considerable extent Illustrate by the force of gravity upon the moon
- 6 What misconception is likely to arise from the use of muscular tension as the type of a force

7 t Does the modern idea of force contain any reference to the supply of energy by which it may happen to be maintained 8 t What restriction not observed by earlier writers exists in the modern use of the word force 9 t Criticise the expressions force of a waterfall force of the wind force of gravity io f Consider a push a pull ora shove as instances of a force What does each imply as to the direction of the force with respect to the agent as to the point of application of the force and as to the state of tension or compression produced n t Criticise the definition of a force as a push or a pull hall s Elementary Ideas To what extent is it supposed that molecular forces can be so classified Is it thought that electromagnetic forces fall into either category
