2nd Edition

## GENERAL INFORMATION - AN OVERVIEW

- The immune system is a defense mechanism of the body characterized by the recognition of nonself in the protection of the body from microorganisms and other harmful substances
- The two main components are innate (nonspecific) immunity and adaptive (specific) immunity
- Innate immunity is a general natural defense against anything recognized as nonself
- It is present (in normal individuals) at all times and triggered as soon as the foreign agent presents itself
- Adaptive immunity is the response of lymphocytes to foreign substances (called antigens), from antibody generating and includes development of immunological memory
- Adaptive immunity consists of two responses against foreign antigens: the humoral response (defined by secretion of antibody by B cells) and the cell-mediated response (which involves the attacking and killing of infected somatic cells directly by T cells)

## INNATE (NONSPECIFIC) IMMUNITY

- Innate immunity has several main protective mechanisms that function without prior exposure to a harmful agent
- |                                 |   |
|---------------------------------|---|
| <b>Antimicrobial Substances</b> | Such as interferon (inhibits viral replication) and complement proteins (puncture bacterial destruction and other effects of inflammation)                                    |
| <b>Fever</b>                    | Produced by endogenous pyrogens secreted by leukocytes and other cells, and serves to intensify the action of interferon, inhibit microbial growth, and enhance tissue repair |
| <b>Gastric Acid</b>             | Destroys swallowed invaders   |
| <b>Inflammatory Response</b>    | Attracts leukocytes to phagocytose invaders   |
| <b>Intact Skin</b>              | Prevents attachment of potential invaders   |
| <b>Mucous</b>                   | Traps bacteria and other foreign material   |
| <b>Natural Killer Cells</b>     | Destroy a variety of microbes and certain tumor cells through direct contact  |

## THE CELLS

<b>Dendritic Cells</b>	Antigen Presenting Cells (APCs) found in T-cell area of lymphoid tissues • Particularly important for initiation of the adaptive immune response	
<b>Macrophages</b>	Phagocytic cells derived from blood monocytes • Contain peroxisomes • Act as APCs, eating foreign bodies or specific foreign antigens by displaying pieces of partially digested antigens on their surface • Express MHC I and MHC II molecules	
<b>B Cells</b>	Lymphocytes that mature in the bone marrow and play a key role in humoral immunity • After being presented with a foreign antigen, the B cell differentiates into either antibody-secreting plasma cells or memory B cells (or activated when the same antigen is encountered again (secondary immune response))	
<b>Plasma Cells</b>	Cells that differentiate from B cells and secrete large amounts of antibodies • 200 cells in a clone of plasma cells secrete identical antibodies because they are descended from the same B cell	
<b>T Cells</b>	Lymphocytes which mature in the thymus and act in humoral and cell-mediated immunity • After being presented with a foreign antigen, T cells differentiate into effector cells that are able to destroy infected cells or activate other cells of the immune system	

## CD4 T-cells

Bear the CD4 marker and respond to MHC II molecules • There are two types: T<sub>H</sub>1 cells (differentiate into effector cells that activate macrophages to destroy intracellular pathogens) and T<sub>H</sub>2 cells (help T cells that stimulate B cells or the same antigenic specificity to differentiate into antibody-secreting plasma cells or memory B cells)

## Cytotoxic T-cells

Bear the CD8 marker and respond to MHC I molecules • Kill infected cells either by releasing perforin (a protein that punches holes in infected cells' membranes) or binding to a receptor on the infected cell to initiate apoptosis (cell suicide) • Important in defense against cytotoxic pathogens

## Memory T-cells

T cells that are produced but not used in a first immune response • They circulate and are ready to respond to subsequent attacks by the same type of invader

## Suppressor T-cells

Suppress the activity of other T cells that are capable of causing tissue damage

in a syndrome of immunity To understand the ambivalent effects of this development it is necessary to go back to its modern genesis when the languages of law politics and medicine began to merge into the biopolitical regime we have been living under for some time This regime places a high priority on immunization and security no security is more important than health security The Covid 19 pandemic has taken the dynamic of immunization to a new level for the first time in history we see societies seeking to achieve generalized immunity in their entire populations through vaccination This allows us to glimpse the possibility of a common immunity that strengthens the relation between community and immunity The dramatic tensions we have experienced in recent years between security and freedom norm and exception power and existence all refer to the complex relationship between community and immunity the decisive features of which are reconstructed in this book Building on the prescient argument originally developed two decades ago in *Immunitas* Roberto Esposito demonstrates in this new book how the pandemic and our responses to it have brought into sharp relief the fundamental biopolitical conditions of our contemporary societies

Diplomatic Immunity John Schembra, 2012-03-21 There are sixty six Consulates and Embassies in San Francisco and a very talented deadly sniper is targeting the Consul Generals seemingly at random San Francisco Homicide inspector Vince Torelli has a reputation for solving the toughest cases in the city but this one is unlike anything else he has faced The killings make no sense lack motive and appear to be unrelated but Vince knows there has to be a link between them As he struggles to find the connection and identify the suspect he becomes a target himself This can end only one of two ways Either he solves the case or he becomes a victim himself

*Diplomatic Immunity* Grant Sutherland, 2002-10-01 Diplomatic immunity n freedom from arrest and submission to police regulations usually accorded by international law to diplomatic agents From the most exciting writer of international thrillers since Robert Ludlum comes a riveting tale of intrigue that propels us into the heart of the United Nations Here conscience and loyalty will collide in one man's desperate race against time Diplomatic Immunity Shock waves ripple through the UN at the stunning news a special envoy has been murdered in the basement In the midst of a high stakes General Assembly vote the last thing officials want is more controversy But Sam Windrush a deputy in Legal Affairs is

determined to pursue his friend's killer despite roadblocks created by everyone from his supervisor and foreign ambassadors to his lover. Even worse, each of his suspects is protected by diplomatic immunity. Each can escape justice. In less than a week, UN officials will wrest the investigation away from him. In less than a week, his fourteen-year career will be on the line. And as time runs out, Sam will face an even greater threat. A new suspect, not protected by diplomatic immunity, has come to light. The only suspect Sam wants to eliminate is the only one he cannot: Webster's Third New International Dictionary of the English Language.

**Rapid Methods and Automation in Microbiology and Immunology** K.-O. Habermehl, 2012-12-06. Rapid progress in molecular biology, genetic engineering, and basic research in immunology has opened up new possibilities for application to diagnostic procedures and to clinical research. In a short period, a new era of diagnosis dawned, covering nearly all fields of microbiology, immunology, and food technology. In consequence of this rapid development, scientists of many disciplines are involved in studying infections of humans, animals, and plants or working in technical microbiology. The application of the newest findings of basic research to diagnostic work and to clinical research covers nearly all fields of microbiology and immunology. Moreover, it underlines the close relationship between diagnosis, therapy, and epidemiology. An outstanding example of these connections is given by the recent development of hepatitis B vaccine. The discovery and identification of a non-cultivable agent by physicochemical and immunological methods were the heralds of a new era in the prevention of infectious diseases. This book provides an up-to-date comprehensive review of developments and future aspects in various fields. I am convinced that the authors have succeeded in furnishing a large variety of new ideas and possibilities.
