classical and contemporary techniques to enable practitioners in neurology and neuropathology to better understanding of the disease processes underlying patients presentations and to formulate appropriate management plans Peripheral Nerve Disorders Pathology and Genetics is a valuable resource for neurologists neuropathologists pathologists neurobiologists and geneticists

The Timing of Neural and Behavioral Events Rumjahn Hoosain,2017-02-01 This monograph reviews cognitive and neuroscience studies of the relations between timing of both neural and behavioral events and human experience The historical roots of these discussions are traced to the beginning of modern psychology In the beginning of experimental psychology in Leibzig Wundt worked on how elements of sensation relate to consciousness In later development of psychology the timing of conscious and unconscious processing of information the timing of events in learning including language learning mental speed and intelligence and the speed of cognition vis vis emotion are all crucial questions Systematic consideration of neural times is complementary to conventional neuroscience research such as the Blue Brain Project focusing on neural structure The discussion of neural times in the literature tends to be fragmented incidental to whatever is the subject matter This book attempts to treat neural times in the whole range of basic psychological processes more systematically and shows how they are germane to the understanding of many cognitive and behavioral phenomena Neural times are related to the evolutionary development of the brain and the human experience A crucial dynamic in the interaction of evolutionarily older and newer regions of the brain depends on timing The interaction of the generally faster unconscious processes including emotions and more deliberate processes results in greater variation of experiences and behaviors which is central to free will and adaptive for humankind as a whole This monograph is intended for senior undergraduates graduate students and professionals interested in an in depth look at the role of timing of neural and behavioral processes in affecting human experience It is not a textbook as such It is a complementary resource for students of cognitive psychology learning and evolutionary psychology

Mapping our genes : the genome projects : how big, how fast? ,1988 *Pandora's Picnic Basket : The Potential and Hazards of Genetically Modified Foods* Alan McHughen, 2000-06-22

The first book to look at all the issues involved in GM genetically modified food technology in a clear and dispassionate way Alan McHughen surveys the technology that makes GM food possible assesses the risk of health and environmental dangers and the regulatory and labelling processes in force to protect the consumer Question and answer boxes and case histories and the author's easy writing style make this an essential purchase for all those interested in the debate Are you concerned about fish genes in tomatoes Worried that brazil nut genes in soybeans can result in potentially lethal allergic reactions That rapeseed plants bred to be resistant to herbicides could become uncontrollable superweeds You are not alone The issue of genetically modified foods has fast become one of the most debated of recent years with scientists and companies seeking to develop the technology on one side and consumer groups and environmentalists on the other However in spite of the great heat generated by the debate there is very little real information on the subject either about the technologies in use or about the regulatory processes established to approve the processes and the products This book sets out to explain in clear and direct language the technologies underlying so called genetically modified food and compares them with other natural methods of plant breeding and production The author then looks at the safeguards in place from regulators around the world and asks whether these are sufficient The question of labelling held by some to be an obvious way out for concerned consumers is examined and the honesty and usefulness of some of these labels addressed The book then looks at issues of real concern particularly environmental issues and ways in which a consumer can seek to avoid GMOs if they so choose In each chapter key topics are addressed through question and answer boxes Real case histories illustrate the development and regulation of GMOs and by the end of the book the reader will be able to make an informed choice about whether to support or challenge this technology the products of which are increasingly pervasive

The Epistemology of Development, Evolution, and

Genetics Richard Burian, 2005 These essays examine the developments in three fundamental biological disciplines embryology evolutionary biology and genetics These disciplines were in conflict for much of the 20th century and the essays in this collection examine key methodological problems within these disciplines and the difficulties faced in overcoming the conflicts between them Burian skillfully weaves together historical appreciation of the settings within which scientists work substantial knowledge of the biological problems at stake and the methodological and philosophical issues faced in integrating biological knowledge drawn from disparate sources
