Nikolski,2010-10-06 Together with the companion volume by the same author Operators Functions and Systems An Easy
Reading Volume 1 Hardy Hankel and Toeplitz Mathematical Surveys and Monographs Vol 92 AMS 2002 this unique work
combines four major topics of modern analysis and its applications A Hardy classes of holomorphic functions B Spectral
theory of Hankel and Toeplitz operators C Function models for linear operators and free interpolations and D Infinite
dimensional system theory and signal processing This volume contains Parts C and D Function models for linear operators
and free interpolations This is a universal topic and indeed is the most influential operator theory technique in the post
spectral theorem era In this book its capacity is tested by solving generalized Carleson type interpolation problems Infinite
dimensional system theory and signal processing This topic is the touchstone of the three previously developed techniques
The presence of this applied topic in a pure mathematics environment reflects important changes in the mathematical
landscape of the last 20 years in that the role of the main consumer and customer of harmonic complex and operator analysis
has more and more passed from differential equations scattering theory and probability to control theory and signal
processing This and the companion volume are geared toward a wide audience of readers from graduate students to
professional mathematicians They develop an elementary approach to the subject while retaining an expert level that can be
applied in advanced analysis and selected applications Emerging Fields in Easy Language and Accessible Communication
