Locomotion and Posture in Older Adults Fabio Augusto Barbieri, Rodrigo Vitório, 2017-02-07 This book is an attempt to advance the discussion and improve our understanding about the effects of aging and movement disorders on motor control during walking and postural tasks. Despite these activities are performed daily, there is a high requirement of motor and neural systems in order to perform both tasks efficiently. Both walking and posture require a complex interaction of musculoskeletal and neural systems. However, the mechanisms used to control these tasks as well as how they are planned and coordinated are still a question of discussion among health professionals and researchers. In addition, this discussion is more interesting when the effects of aging are included in the context of locomotion and the postural control. The number of older individuals is 841 million in 2015, which is four times higher than the 202 million that lived in 1950. Aging causes many motor, sensorial, and neural deficits which impair locomotion and postural control in the elderly. The severity of this framework is worsened when the aging goes along with a movement disorder such as Parkinson disease, Chorea, Dystonia, Huntington disease, etc. Therefore, the aim of this book is to highlight the influence of different aspects on planning, controlling, and performing locomotion and posture tasks. In attempting to improve current knowledge in this field, invited authors present and discuss how environmental, sensorial, motor, cognitive, and individual aspects influence the planning and performance of locomotor and postural activities. The major thrust of the book is to address the mechanisms involved in controlling and planning motor action in neurologically healthy individuals as well as in those who suffer from movement disorders or face the effects of aging, indicating the aspects that impair locomotion and postural control. In addition, new technologies, tools, and interventions designed to manage the effects of aging and movement disorders are presented in the book.

Psychological Dynamics of Sport and Exercise Diane L. Gill, Lavon Williams, Erin J. Reifsteck, 2017-06-23

Psychological Dynamics of Sport and Exercise Fourth Edition reflects the latest developments in the field of sport and

exercise psychology and presents various applications in a range of physical activity settings. The text emphasizes practical theory which allows students pursuing careers in teaching, coaching, consulting, exercise instruction and leadership, sports medicine, rehabilitation and athletic training environments to enhance physical activity experiences for all based on the best available knowledge. With emphasis on practical application, readers can incorporate sport and exercise psychology into both their professional and personal experiences. Authors Diane L. Gill, Lavon Williams and Erin J. Reifsteck highlight key theoretical work and research to provide guidelines for using sport and exercise psychology in professional practice and personal physical activities. The fourth edition of *Psychological Dynamics of Sport and Exercise* includes reorganized, revised content and relevant up-to-date research to emphasize the areas of change and growth in the field in recent years. Specific updates to this edition include the following: Part IV on emotion is now expanded to include two in-depth chapters, one focusing on emotion and performance and one on physical activity and mental health, as well as a third chapter on stress management. Part III on the popular topic of motivation is reorganized to emphasize contemporary research and connections to professional practice. The chapter on aggression and social development now includes more current research on prosocial and antisocial behavior as well as an expanded section on positive youth development. In-class and out-of-class lab activities replace case studies to provide scenario-based experiential activities for a more applied learning experience. Updated end-of-chapter summaries, review questions and recommended readings reinforce key concepts and encourage further study. Application Point sidebars have been updated to cover a wide variety of professions in order to connect the content with real-world application. A newly added image bank helps instructors prepare class lectures. Content is organized into five parts representing major topics that are found in sport and exercise psychology curriculums. Part I provides an orientation with chapters covering the scope, historical development and current approaches to sport and exercise psychology. Part II focuses on the individual with chapters on personality, attention and cognitive skills and self-perceptions. Part III covers the broad topic of motivation, addressing the 'why' question of physical activity behavior. Part IV looks at emotion, including the relationship between physical activity and emotion as well as stress management. Part V considers social processes in chapters on social influence, social development and group dynamics as well as cultural diversity. With more in-depth coverage than introductory level texts, *Psychological Dynamics of Sport and Exercise* Fourth Edition brings sport and exercise psychology to life for students as they prepare for their professional lives. Emphasis is placed on sport and exercise psychology concepts as they apply to three key areas of kinesiology professions: physical education, teaching, coaching and consulting, exercise instruction and fitness, leadership and sports medicine, rehabilitation and athletic training. By focusing on these professional settings, readers will understand how psychology concepts are integral to real-world situations outside of the classroom.
