Bistatic SAR / GISAR / FISAR Geometry, Signal Models and Imaging Algorithms Andon Dimitrov Lazarov, Todor Pavlov Kostadinov, 2013-12-11 Bistatic radar consists of a radar system which comprises a transmitter and receiver which are separated by a distance comparable to the expected target distance This book provides a general theoretical description of such bistatic technology in the context of synthetic aperture inverse synthetic aperture and forward scattering radars from the point of view of analytical geometrical and signal formation as well as processing theory

Signal formation and image reconstruction algorithms are developed with the application of high informative linear frequency and phase code modulating techniques and numerical experiments that confirm theoretical models are carried out. The authors suggest the program implementation of developed algorithms. A theoretical summary of the latest results in the field of bistatic radars is provided before applying an analytical geometrical description of scenarios of bistatic synthetic aperture inverse synthetic aperture and forward scattering radars with cooperative and non cooperative transmitters. Signal models with linear frequency and phase code modulation are developed and special phase modulations with C A coarse acquisition and P precision of GPS satellite transmitters are considered. The authors suggest Matlab implementations of all geometrical models and signal formation and processing algorithms.
