Celestial Calculations J. L.

Lawrence,2019-05-14 How to predict and calculate the positions of stars planets the sun the moon and satellites using a personal computer and high school mathematics Our knowledge of the universe is expanding rapidly as space probes launched decades ago begin to send information back to earth There has never been a better time to learn about how planets stars and satellites move through the heavens This book is for amateur astronomers who want to move beyond pictures of constellations in star guides and solve the mysteries of a starry night It is a book for readers who have wondered for example where Saturn will appear in the night sky when the sun will rise and set or how long the space station will be over their location In Celestial Calculations J L Lawrence shows readers how to find the answers to these and other astronomy questions with only a personal computer and high school math Using an easy to follow step by step approach Lawrence explains what calculations are required why they are needed and how they all fit together Lawrence begins with basic principles unit of measure conversions time conversions and coordinate systems He combines these concepts into a computer program that can calculate the location of a star and uses the same methods for predicting the locations of the sun moon and

planets He then shows how to use these methods for locating the many satellites we have sent into orbit Finally he describes a variety of resources and tools available to the amateur astronomer including star charts and astronomical tables Diagrams illustrate the major concepts and computer programs that implement the algorithms are included Photographs of actual celestial objects accompany the text and interesting astronomical facts are interspersed throughout Source code in Python 3 JAVA and Visual Basic and executables for all the programs and examples presented in the book are available for download at <https://CelestialCalculations.github.io>
