Department Of Economics And Statistics Staff, 1991-12-01 **Quarterly National Accounts** Organization for Economic Cooperation and Development, 1994-10-01 *Nowcasting Annual National Accounts with Quarterly Indicators* Mr. Marco Marini, 2016-03-18 Benchmarking methods can be used to extrapolate or nowcast low frequency benchmarks on the basis of available high frequency indicators Quarterly national accounts are a typical example where a number of monthly and quarterly indicators of economic activity are used to calculate preliminary annual estimates of GDP Using both simulated and real life national accounts data this paper aims at assessing the prediction accuracy of three benchmarking methods widely used in the national accounts compilation the proportional Denton method the proportional Cholette Dagum method with first order

autoregressive error and the regression based Chow Lin method The results show that the Cholette Dagum method provides the most accurate extrapolations when the indicator and the annual benchmarks move along the same trend However the Denton and Chow Lin methods could prevail in real life cases when the quarterly indicator temporarily deviates from the target series *Quarterly National Accounts* ,1996 *Handbook on Quarterly National Accounts* ,1999 *Understanding National Accounts* Lequiller François,Blades Derek,2007-03-09 This manual explains what GDP and GNI and their components are and what they mean It shows how they are used and what they are used for And it uses practical examples and exercises to clearly explain these notions *Understanding National Accounts Second Edition* Lequiller François,Blades Derek,2014-10-20 This is an update of OECD 2006 *Understanding National Accounts* It contains new data new chapters and is adapted to the new systems of national accounts SNA 2008 and ESA 2010 *Quarterly National Accounts* ,2009 *Quarterly National Accounts* ,2002 *Quarterly National Accounts* ,1982 *Quarterly National Accounts as Data for Economic Policy* Organisation for Economic Co-operation and Development,1968 **Estimated Monthly National Accounts for the United States** Mr. Philip Barrett,2025-07-04 I jointly estimate monthly series for GDP and eight subcomponents for the US since 1950 The series match 1 quarterly national accounts equivalents 2 exact data on monthly consumption and 3 past relationships with other monthly indicators I estimate the Kalman filter parameters by GMM allowing fast calculation of confidence intervals for monthly estimates including parameter uncertainty and validate the confidence intervals After 1970 standard errors are tight less than 0.3pp of GDP and point estimates informative with standard deviations four times the standard error I provide confidence intervals for recessions and show that output peaks line up well with the onset of NBER recessions but troughs often predate NBER equivalents
