Query Processing For Advanced Database Systems:

Principles of Database Query Processing for Advanced Applications Clement T. Yu, Weiyi Meng, 1998 A thorough presentation of query processing techniques in a broad range of database systems for advanced applications Provides the most effective query processing techniques and ways to optimize the information retrieval process Intended for database systems designers creating advanced applications

Query Processing for Advanced Database Systems Johann Christoph Freytag, David Maier, Gottfried Vossen, 1994 The chapters of this book provide an excellent snapshot of current research and development activities in the area of query processing and optimization They supply potential answers to many questions that have been raised for new types of database systems and at the same time reflect the variety of the different approaches taken The book acts both as a reference for the state of the art in query processing for the next generation of database systems and as a good starting point for anybody interested in understanding the challenging questions in the area Furthermore the book will help the reader to gain an in depth understanding of why efficient query processing is needed for future database systems

An Approach to Query Processing in Advanced Database Systems Joachim Thomas, 1996

Advanced Database Systems Carlo Zaniolo, 1997-05 The database field has experienced a rapid and incessant growth since the development of relational databases The progress in database systems and applications has produced a diverse landscape of specialized technology areas that have often become the exclusive domain of research specialists Examples include active databases temporal databases object oriented databases deductive databases imprecise reasoning and queries and multimedia information systems This book provides a systematic introduction to and an in depth treatment of these advanced database areas It supplies practitioners and researchers with authoritative coverage of recent technological advances that are shaping the future of commercial database systems and intelligent information systems Advanced Database Systems was written by a team of six leading specialists who have made significant contributions to the development of the technology areas covered in the book Benefiting from the authors long experience teaching graduate and professional courses this book is designed to provide a gradual introduction to advanced research topics and includes many examples and exercises to support its use for individual study desk reference and graduate classroom teaching

Advanced Database Systems Nabil R. Adam, Bharat K. Bhargava, 1993-12-08 Database management is attracting wide interest in both academic and industrial contexts New application areas such as CAD CAM geographic information systems and multimedia are emerging The needs of these application areas are far more complex than those of conventional business applications The purpose of this book is to bring together a set of current research issues that addresses a broad spectrum of topics related to database systems and applications The book is divided into four parts object oriented databases temporal historical database systems query processing in database systems heterogeneity interoperability open system architectures multimedia database systems

Kim,D.S. Reiner,Don Batory,2012-12-06 This book is an anthology of the results of research and development in database query processing during the past decade The relational model of data provided tremendous impetus for research into query processing Since a relational query does not specify access paths to the stored data the database management system DBMS must provide an intelligent query processing subsystem which will evaluate a number of potentially efficient strategies for processing the query and select the one that optimizes a given performance measure The degree of sophistication of this subsystem often called the optimizer critically affects the performance of the DBMS Research into query processing thus started has taken off in several directions during the past decade The emergence of research into distributed databases has enormously complicated the tasks of the optimizer In a distributed environment the database may be partitioned into horizontal or vertical fragments of relations Replicas of the fragments may be stored in different sites of a network and even migrate to other sites The measure of performance of a query in a distributed system must include the communication cost between sites To minimize communication costs for queries involving multiple relations across multiple sites optimizers may also have to consider semi join techniques

documents Traditional indexing techniques such as the B tree and its variants do not efficiently support these applications and so new indexing mechanisms have been developed As a result of the demand for database support for new applications there has been a proliferation of new indexing techniques The need for a book addressing indexing problems in advanced applications is evident For practitioners and database and application developers this book explains best practice guiding the selection of appropriate indexes for each application For researchers this book provides a foundation for the development of new and more robust indexes For newcomers this book is an overview of the wide range of advanced indexing techniques Indexing Techniques for Advanced Database Systems is suitable as a secondary text for a graduate level course on indexing techniques and as a reference for researchers and practitioners in industry [Database Systems for Advanced Applications '97](#) Rodney Topor,Katsumi Tanaka,1997 This volume contains the proceedings of the Fifth International Conference on Database Systems for Advanced Applications DASFAA 97 DASFAA 97 focused on advanced database technologies and their applications The 55 papers in this volume cover a wide range of areas in the field of database systems and applications including the rapidly emerging areas of the Internet multimedia and document database systems and should be of great interest to all database system researchers and developers and practitioners [Database Systems For Advanced Applications '93 - Proceedings Of The 3rd International Symposium On Database Systems For Advanced Applications](#) S C Moon,H Ikeda,1993-03-18 This proceedings volume contains 52 technical research papers on multidatabases distributed DB multimedia DB object oriented DB real time DB temporal DB deductive DB and intelligent user interface Some industrial papers are also included **Database Systems for Advanced Applications** Weiyi Meng,Ling Feng,Stephane Bressan,Werner Winiwarter,Wei Song,2013-04-17 This two volume set LNCS 7825 and LNCS 7826 constitutes the refereed proceedings of the 18th International Conference on Database Systems for Advanced Applications DASFAA 2013 held in Wuhan China in April 2013 The 51 revised full papers and 10 short papers presented together with 2 invited keynote talks 1 invited paper 3 industrial papers 9 demo presentations 4 tutorials and 1 panel paper were carefully reviewed and selected from a total of 227 submissions The topics covered in part 1 are social networks query processing nearest neighbor search index query analysis XML data management privacy protection and uncertain data management and in part 2 graph data management physical design knowledge management temporal data management social networks query processing data mining applications and database applications [Database Systems for Advanced Applications](#) Yunmook Nah,Bin Cui,Sang-Won Lee,Jeffrey Xu Yu,Yang-Sae Moon,Steven Euijong Whang,2020-09-21 The 4 volume set LNCS 12112 12114 constitutes the papers of the 25th International Conference on Database Systems for Advanced Applications which will be held online in September 2020 The 119 full papers presented together with 19 short papers plus 15 demo papers and 4 industrial papers in this volume were carefully reviewed and selected from a total of 487 submissions The conference program presents the state of the art R D activities in database systems and their applications It provides a forum for
