Recollections Commencement Remarks Publications of Emil Wolf Readership Physicists and engineers particularly optical scientists and optical engineers Selected Papers of Kun Huang Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph Dynamical Theory of Crystal Lattices During his years of active research he has made important contributions to solid state physics This collection of papers is selected at his own choice as representing his most influential works Included is his work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation his early prediction of diffuse X ray scattering due to crystal defects and his research works on low dimensional semiconductor structures and more Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work such as background motivation and rationale involved Thus he was led to write a commentary which is published alongside the papers

*Murray Gell-mann - Selected Papers* Harald Fritzsch, 2010-02-08 Murray Gell Mann is one of the leading physicists of the world He was awarded the Nobel Prize in Physics in 1969 for his work on the classification and symmetries of elementary particles including the approximate SU 3 symmetry of hadrons His list of publications is impressive a number of his papers have become landmarks in physics In 1953 Gell Mann introduced the strangeness quantum number conserved by the strong and electromagnetic interactions but not by the weak interaction In 1954 he and F E Low proposed what was later called the renormalization group In 1958 he and R P Feynman wrote an important article on

the V A theory of the weak interaction In 1961 and 1962 he described his ideas about the SU 3 symmetry of hadrons and its violation leading to the prediction of the particle In 1964 he proposed the quark picture of hadrons In 1971 he and H Fritzsch proposed the exactly conserved color quantum number and in 1972 they discussed what they later called quantum chromodynamics QCD the gauge theory of color These major publications and many others are collected in this volume providing physicists with easy access to much of Gell Mann s work Some of the articles are concerned with his recollections of the history of elementary particle physics in the third quarter of the twentieth century

**Formation And Evolution Of Black Holes In The Galaxy: Selected Papers With Commentary** Hans A Bethe, Gerald E Brown, Chang-hwan Lee, 2003-03-04. In published papers H A Bethe and G E Brown worked out the collapse of large stars and supernova explosions. They went on to evolve binaries of compact stars finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution. C H Lee joined them in the study of black hole binaries and gamma ray bursts. They found the black holes to be the fossils of the gamma ray bursts. From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions. This invaluable book contains 23 papers on astrophysics chiefly on compact objects written over 23 years. The papers are accompanied by illuminating commentary. In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses.

Many-body Theory of Molecules, Clusters, and Condensed Phases Norman Henry March, G. G. N. Angilella, 2010. This book provides a comprehensive review of seminal as well as recent results in the theory of condensed phases including liquid metals, quantum liquids and Wigner crystals along with selected applications especially in the physical chemistry of molecules and clusters.
