Queueing Models in Industry and Business Aliakbar Montazer Haghighi, Dimiter P. Mishev, 2008 Studies on queueing models and their publication in professional journals and textbooks have been sparse over the past eleven decades Collections of some of these studies have appeared either as single volumes or just chapters of single volumes and or monographs This book is an attempt to present some queueing models especially those applicable in business and industry in a style between a monograph and a textbook Also the need of researchers and practitioners for a handbook type text and the current lack of it explain the need for a book of this kind Most of the basic terminologies and concepts that appear throughout the text are introduced in a systematic way in the first two chapters nevertheless previous exposition to a first course in probability and statistics is advised for later chapters

**Fundamentals of Queueing Networks** Hong Chen, David D. Yao, 2013-04-17 The objective of this book is to collect in a single volume the essentials of stochastic networks from the classical product form theory to the more recent developments such as diffusion and fluid limits stochastic comparisons stability control dynamic scheduling and optimization The selection of materials inevitably is a reflection upon our bias and preference but it is also driven to a large extent by our desire to provide a graduate level text that is well balanced in breadth and depth suitable for the classroom Given the wide ranging applications of stochastic networks in recent years from supply chains to telecommunications it is also our hope that the book will serve as a useful reference for researchers and students alike in these diverse fields The book consists of three parts The first part Chapters 1 through 4 covers continuous time Markov chain models including the classical Jackson and Kelly networks the notion of quasi reversible

queues and stochastic comparisons The second part Chapters 5 through 10 focuses on Brownian models including limit theorems for generalized Jackson net works and multiclass feedforward networks an in depth examination of stability in a Kumar Seidman network and Brownian approximations for general multiclass networks with a mixture of priority and first in first out disciplines The third part Chapters 11 and 12 discusses scheduling in both queueing stochastic and fluid deterministic networks along with topics such as conservation laws polymatroid optimization and linear programming
