accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Heterocyclic Chemistry John A. Joule, Keith

Mills, 2010-06-15 This book has so closely matched the requirements of its readership over the years that it has become the first choice for chemists worldwide Heterocyclic chemistry comprises at least half of all organic chemistry research worldwide In particular the vast majority of organic work done in the pharmaceutical and agrochemical industries is heterocyclic chemistry The fifth edition of Heterocyclic Chemistry maintains the principal objective of earlier editions to teach the fundamentals of heterocyclic reactivity and synthesis in a way that is understandable to second and third year undergraduate chemistry students The inclusion of more advanced and current material also makes the book a valuable reference text for postgraduate taught courses postgraduate researchers and chemists at all levels working with heterocyclic compounds in industry Fully updated and expanded to reflect important 21st century advances the fifth edition of this classic text includes the following innovations Extensive use of colour to highlight changes in structure and bonding during reactions Entirely new chapters on organometallic heterocyclic chemistry heterocyclic natural products especially in biochemical processes and heterocycles in medicine New sections focusing on heterocyclic fluorine compounds isotopically labeled heterocycles and solid phase chemistry microwave heating and flow reactors in the heterocyclic context Essential teaching material in the early chapters is followed by short chapters throughout the text which capture the essence of heterocyclic reactivity in concise resum s suitable as introductions or summaries for example for examination preparation Detailed systematic discussions cover the reactivity and synthesis of all the important heterocyclic systems Original references and references to reviews are given throughout the text vital for postgraduate teaching and for research scientists Problems divided into straightforward revision exercises and more challenging questions with solutions available online help the reader to understand and apply the principles of heterocyclic reactivity and synthesis
