Davis, Margo DeMello, 2003-08 Revered as a symbol of fertility sexuality purity and childhood beloved as a children's pet and widely represented in the myths art and collectibles of almost every culture the rabbit is one of the most popular animals known to humans Ironically it has also been one of the most misunderstood and abused Indeed the rabbit is the only animal that our culture adores as a pet idolizes as a storybook hero and slaughters for commercial purposes Stories Rabbits Tell takes a comprehensive look at the rabbit as a wild animal ancient symbol pop culture icon commercial product and domesticated pet In so doing the book explores how one species can be simultaneously adored as a symbol of childhood think Peter Rabbit revered as a symbol of female sexuality e.g. Playboy Bunnies dismissed as a dumb bunny in domesticity and loathed as a pest in the wild The authors counter these stereotypes with engaging analyses of real rabbit behavior drawn both from the authors own experience and from academic studies and place those behaviors in the context of current debates about animal consciousness In a detailed investigative section the authors also describe conditions in the rabbit meat fur pet and vivisection industries and raise important questions about the ethics of treating rabbits as we do The first book of its kind Stories Rabbits Tell provides invaluable information and insight into the life and history of an animal whom many love but whom most of us barely know As such it is a key addition to the current thinking on animal emotions intelligences and welfare and the way that human perceptions influence the treatment of individual species      **Rabbits** Louise Spilsbury, Richard Spilsbury, 2006 This book explores the fun parts about keeping rabbits as pets and looks at their natural behavior It describes how to properly care for a rabbit

Clarke,2014-10-24 This major study reflects the increasing significance of careful model formation and testing in those academic subjects that are struggling from intuitive and aesthetic obscurantism toward a more disciplined and integrated approach to their fields of study The twenty six original contributions represent the carefully selected work of progressive archaeologists around the world covering the use of models on archaeological material of all kinds and from all periods from Palaeolithic to Medieval Their common theme is archaeological generalisation by means of explicit model building testing modification and reapplication The contributors seek to show that it is the use of certain models in particular ways that defines archaeology as the practice of one discipline with a set of general tenets that are as applicable in Peru as in Persia Australia as Alaska Sweden as Scotland on material from the second millennium B C to the second millennium A D They assert that careful model formulation within archaeology and the cautious exchange and testing of models within and beyond the discipline provides the only route to the formation of the common internationally valid body of theory which defines a vigorous and coherent discipline and distinguishes it from being a collection of merely regionally applicable special cases      Rabbit Production, 10th Edition Steven D. **Primary Photo-Processes in Biology and Medicine** R. V. Bensasson, 2013-06-29 Recently there have been major developments in the experimental techniques available for the study of the primary events following the absorption of ultra violet and visible radiation by biological systems These techniques which include absorption emission resonance Raman electron spin resonance nuclear magnetic resonance and photoacoustic spectroscopies can be used to study the fate of transient species with lifetimes ranging from seconds to nanoseconds and extending in some cases such as laser flash photolysis to pico 12 15 10 S and even femtoseconds 10 s In parallel with these developments there has been a dramatic increase in the use of light in medicine via the direct photochemical alteration of endogenous molecules phototherapy or via the photoactivation of drugs in the skin or other tissue photochemotherapy Thus neonatal hyperbilirubinaemia can be routinely treated by phototherapy and psoriasis is frequently treated by PUVA photochemotherapy A promising new photo chemotherapy used the phototoxicity of porphyrin drugs activated by red light to destroy solid malignant tumors While some of the overall qualitative effects of such treatments are known only recently have we begun to understand the associated molecular mechanisms The primary molecular processes involve short lived species The purpose of this Advanced Study Institute was to review some newer experimental techniques for the study of such species the application of these techniques to biological and medical systems and to examine the value of such information in phototherapeutic situations
