Raymond C. Watson, Jr., 2009-11-25 **Secret Weapons and World War II** Walter E. Gruenden, 2005 Gruenden's analysis of this fundamental flaw in the Japanese war effort seamlessly weaves together science technology and military history to provide an entirely unique look at a crucial but understudied aspect of World War II Comparing the science and weapons programs of all the major combatants he demonstrates that Japan's failure was nearly inevitable given its paucity of strategic resources an inadequate industrial base the absence of effective centralized management to coordinate research military hostility toward civilian scientists and bitter interservice rivalries In the end Japan could not overcome these obstacles and thus failed to make the transition to the kind of Big Science it needed to ward off its enemies and dominate the Far East

Jensen, Christopher Whyte, Scott Cuomo, 2022-10-03 An in depth assessment of innovations in military information technology informs hypothetical outcomes for artificial intelligence adaptations In the coming decades artificial intelligence AI could revolutionize the way humans wage war The military organizations that best innovate and adapt to this AI revolution will likely gain significant advantages over their rivals To this end great powers such

as the United States China and Russia are already investing in novel sensing reasoning and learning technologies that will alter how militaries plan and fight The resulting transformation could fundamentally change the character of war In *Information in War* Benjamin Jensen Christopher Whyte and Scott Cuomo provide a deeper understanding of the AI revolution by exploring the relationship between information organizational dynamics and military power The authors analyze how militaries adjust to new information communication technology historically to identify opportunities risks and obstacles that will almost certainly confront modern defense organizations as they pursue AI pathways to the future *Information in War* builds on these historical cases to frame four alternative future scenarios exploring what the AI revolution could look like in the US military by 2040

A History of Technoscience David F. Channell, 2017-06-14 Are science and technology independent of one another Is technology dependent upon science and if so how is it dependent Is science dependent upon technology and if so how is it dependent Or are science and technology becoming so interdependent that the line dividing them has become totally erased This book charts the history of technoscience from the late nineteenth century to the end of the twentieth century and shows how the military industrial academic complex and big science combined to create new examples of technoscience in such areas as the nuclear arms race the space race the digital age and the new worlds of nanotechnology and biotechnology

Blood and Ruins Richard Overy, 2023-04-04 Monumental A vast and detailed study that is surely the finest single volume history of World War II Richard Overy has given us a powerful reminder of the horror of war and the threat posed by dictators with dreams of empire The Wall Street Journal A thought provoking and original reassessment of World War II from Britain's leading military historian A New York Times bestseller Richard Overy sets out in *Blood and Ruins* to recast the way in which we view the Second World War and its origins and aftermath As one of Britain's most decorated and respected World War II historians he argues that this was the last imperial war with almost a century long lead up of global imperial expansion which reached its peak in the territorial ambitions of Italy Germany and Japan in the 1930s and early 1940s before descending into the largest and costliest war in human history and the end after 1945 of all territorial empires Overy also argues for a more global perspective on the war one that looks broader than the typical focus on military conflict between the Allied and Axis states Above all Overy explains the bitter cost for those involved in fighting and the exceptional level of crime and atrocity that marked the war and its protracted aftermath which extended far beyond 1945 *Blood and Ruins* is a masterpiece a new and definitive look at the ultimate struggle over the future of the global order which will compel us to view the war in novel and unfamiliar ways Thought provoking original and challenging *Blood and Ruins* sets out to understand the war anew

Ready for Battle Azriel Lorber,2014-10-30 Technology and its proper use constitute key components in the strength of any armed forces However battlefield technologies constantly evolve in the quest for competitive advantage with the rate at which new concepts and devices appear steadily increasing In the world of technological intelligence militaries worldwide not only seek to advance their technologies but to gather information about the latest technological and scientific developments of present and future adversaries evaluate their possible impacts and prevent as much as possible the advantages gained by technological surprise that sudden appearance of novel weapon systems that can tilt the success of an operation battle or even war While ample documentation circulates on operational intelligence defined as information about an enemy s order of battle and intentions and operational surprise technological intelligence and consequently technological surprise receives far less attention than today s military reality merits In Ready for Battle Technological Intelligence on the Battlefield Azriel Lorber rectifies this slant towards operational intelligence engaging through historical example and policy prescription technology s role in modern warfare and the dangers presented by technological inferiority on the one hand and technological surprise on the other Throughout he offers examples of well kept technological secrets that turned the tides of battle as well as less well hidden efforts that failed in their effect Ready for Battle analyzes the challenges presented and possible methods for addressing questions of technological surprise drawing on historical examples of failure and success and offering insights into the intricacies of technological deception This work will interest military historians and officers security analysts and defense industry professionals

Innovating Victory Vincent OHara,Leonard R Heinz,2022-04-15 Innovating Victory Naval Technology in Three Wars studies how the world s navies incorporated new technologies into their ships their practices and their doctrine It does this by examining six core technologies fundamental to twentieth century naval warfare including new platforms submarines and aircraft new weapons torpedoes and mines and new tools radar and radio Each chapter considers the state of a subject technology when it was first used in war and what navies expected of it It then looks at the way navies discovered and developed the technology s best use in many cases overcoming disappointed expectations It considers how a new technology threatened its opponents not to mention its users and how those threats were managed Innovating Victory shows that the use of technology is more than introducing and mastering a new weapon or system Differences in national resources force mixtures priorities perceptions and missions forced nations to approach the problems presented by new technologies in different ways Navies that specialized in specific technologies often held advantages over enemies in some areas but found themselves disadvantaged in others Vincent P O Hara and Leonard R

Heinz present new perspectives and explore the process of technological introduction and innovation in a way that is relevant to today's navies which face challenges and questions even greater than those of 1904 1914 and 1939 **Making Waves** M Goss, 2013-07-10 This book is an abbreviated partly re-written version of *Under the Radar The First Woman in Radio Astronomy* Ruby Payne Scott It addresses a general readership interested in historical and sociological aspects of astronomy and presents the biography of Ruby Payne Scott 1912 1981 As the first female radio astronomer and one of the first people in the world to consider radio astronomy she made classic contributions to solar radio physics She also played a major role in the design of the Australian government's Council for Scientific and Industrial Research radars which were in turn of vital importance in the Southwest Pacific Theatre in World War II These radars were used by military personnel from Australia the United States and New Zealand From a sociological perspective her career offers many examples of the perils of being a female academic in the first half of the 20th century Written in an engaging style and complemented by many historical photographs this book offers fascinating insights into the beginnings of radio astronomy and the role of a pioneering woman in astronomy To set the scene the first colourfully illustrated chapter presents an overview of solar astrophysics and the tools of the radio astronomer From the reviews of *Under the Radar* This is a beautifully researched copiously illustrated and well written book that tells us much more than the life of one amazing female radio astronomer It also provides a profile on radar developments during WWII and on Australia's pre eminent place in solar radio astronomy in the years following WWII *Under the Radar* is compelling reading and if you have taken the time to read right through this review then it certainly belongs on your bookshelf Wayne Orchiston *Journal of Astronomical History and Heritage* March 2010 [Military Enterprise and Technological Change](#) Merritt Roe Smith, 1985 In this book historians of technology bring their special expertise to probing the influence of the military on technological development over a broad range of history and in a variety of cases **Making Modern Science, Second Edition** Peter J. Tucker, 2020-03-26 This work covers major weapons throughout human history beginning with clubs and maces through crossbows swords and gunpowder up to the hypersonic

The US Navy and the War in Europe Robert C. Stern, 2012-04-03 The author of Big Gun Battles shows how the US Navy was slowly but surely drawn into WW2 in the Atlantic theatre of operations well researched Warships Magazine Although the defeat of Japan was the US Navy's greatest contribution to the Second World War it also played a significant role in the battle against Hitler Even before Germany declared war in 1941 US naval vessels were actively engaged in Atlantic convoy battles and suffered their first casualties long before the Pearl Harbor attack formally pitched America into the conflict Thereafter the US Navy immediately sent reinforcements to the over stretched Royal Navy taking part in attacks on German occupied Norway flying aircraft to Malta and Egypt from its carriers and adding protection to the convoys to Russia Its involvement in the crucial Battle of the Atlantic was also substantial and the invasions of North Africa and Europe from 1942 onwards would have been unthinkable without the massive US forces As late as 1945 the crossing of the Rhine by the Allied armies was heavily dependent on US Navy assets and expertise It is not surprising that the Pacific campaign should have received so much attention from naval historians but as a result the European effort has been undervalued and largely side lined This book is intended to redress the balance not just to chronicle the many little known US operations in the Atlantic Arctic and Mediterranean but to reach a more rounded judgment of the US Navy's contribution to victory in Europe

Information at Sea Timothy S. Wolters, 2013-11-01 This is the first book to explore information management at sea as practiced by the U S Navy from the Civil War to World War II The brain of a modern warship is its combat information center CIC Data about friendly and enemy forces pour into this nerve center contributing to command decisions about firing maneuvering and coordinating Timothy S Wolters has written the first book to investigate the history of the CIC and the many other command and control systems adopted by the U S Navy from the Civil War to World War II What institutional ethos spurred such innovation Information at Sea tells the fascinating stories of the naval and civilian personnel who developed an array of technologies for managing information at sea from signal flares and radio to encryption machines and radar Wolters uses previously untapped archival sources to explore how one of America's most

technologically oriented institutions addressed information management before the advent of the digital computer He argues that the human machine systems used to coordinate forces were as critical to naval successes in World War II as the ships and commanders more familiar to historians

Hellships Down Michael Sturma, 2021-04-02 On 12 September 1944 a wolfpack of U S submarines attacked the Japanese convoy HI 72 in the South China Sea Among the ships sunk were two carrying Allied prisoners of war Men who had already endured the trials of Japanese captivity faced a renewed struggle for survival at sea This book tells the broader story of the HI 72 convoy through the stories of two survivors Arthur Bancroft who was rescued by an American submarine and Charles Rowley Richards who was rescued by the Japanese The story of these men represents the thousands of Allied POWs who suffered not only the atrocious conditions of these Japanese hellships but also the terror of friendly fire from their own side s submarines For the first time the personal political and legal aftermath of these men s experiences is fully detailed At its heart this is a story of survival Charting the survivors fates from rescue to their attempts at retribution this book reveals the trauma that continued long after the war was over
