Separate sections describe how current knowledge of the three fundamental physical phenomena refraction reflection and diffraction is applied to the problems of low altitude propagation. Simple models incorporating these phenomena are discussed 1 propagation over a plane with arbitrary reflection coefficient 2 propagation over a knife edge on a plane and 3 propagation over a smooth spherical earth. Computer programs for models 2 and 3 are given in the Appendices. We include a bibliography of the literature on which this report is based books journal articles and technical reports. **Maritime Surveillance Systems** A. Nejat Ince,Ercan Topuz,Erdal Panayirci,Cevdet Isik,2012-12-06 Information is always required by organizations of coastal states about the movements identities and intentions of vessels sailing in the waters of interest to them which may be coastal waters straits inland waterways rivers lakes or open seas. This interest may stem from defense requirements or from needs for the protection of off shore resources enhanced search and rescue services deterrence of smuggling drug trafficking and other illegal activities and or for providing vessel traffic services for safe and efficient navigation and protection of the environment. To meet these needs it is necessary to have a well designed maritime surveillance and control system capable of tracking ships and providing other types of information required by a variety of user groups ranging from port authorities shipping companies marine exchanges to governments and the military. Principles of Integrated Maritime Surveillance Systems will be of vital interest to anyone responsible for the design implementation or
