Reflections On 25 Years Issue 80:

Feminist Periodicals ,2005 **The Metaphysics of Market Power** George Raitt,2019-05-02 Australian competition law has just emerged from a significant period of reform which has seen controversial changes to the legal test to distinguish between normal competitive conduct and conduct that should be condemned The controversy continues arguably because the traditional legal conception of market power does not provide a useful standard in real world markets This important new book offers a radical interpretation of market power based on the power to manipulate Seeing it in this way allows for positive and normative standards within which to frame a legal theory of liability for misuse of that power The book provides suggestions to improve the forensic assessment of conduct that should be condemned as misuse of market power

Changing Times Martin Chick,2019-12-05 This is a study of how and why the British economy has changed since 1951 It covers the Golden Age of 1945 1973 when unemployment was below one million when governments built millions of council houses and flats when electricity telephones and gas were supplied by nationalised monopolies when income and wealth inequality were narrowing and when the UK was not a member of the European Economic Community Moving through the inflation rising unemployment and rapid contraction of the manufacturing industry from the mid 1970s Changing Times examines the transfer of assets which was effected in the privatisation of public housing and nationalised industries from the early 1980s The role of the State changed as public investment fell The financing of old age care of state pensions and of the National Health Service became of increasing concern and were less politically amenable to the approach of using

private finance the Private Finance Initiative and tuition fees to fund former public obligations Changes were made to the system of taxation but public expenditure changed little as a share of national income although the government now built little Difficulties emerged in ensuring adequate housing for a growing population and uncertainty grew as to where future investment in necessities like electricity supply would come from Having narrowed in the Golden Age inequality of income and wealth widened Environmental concerns also grew from the local smogs of the 1950s through the concern with acid rain from the 1960s to the current global concern with climate change The financial crash of 2008 and the decision to Brexit in the referendum of 2016 reduced economic growth and highlighted the extent of economic change since 1951 This is a study of that change

Faith in Action Richard L. Wood, 2002-09-15 Over the past fifteen years associations throughout the U S have organized citizens around issues of equality and social justice often through local churches But in contrast to President Bush s vision of faith based activism in which groups deliver social services to the needy these associations do something greater Drawing on institutions of faith they reshape public policies that neglect the disadvantaged To find out how this faith based form of community organizing succeeds Richard L Wood spent several years working with two local groups in Oakland California the faith based Pacific Institute for Community Organization and the race based Center for Third World Organizing Comparing their activist techniques and achievements Wood argues that the alternative cultures and strategies of these two groups give them radically different access to community ties and social capital Creative and insightful Faith in Action shows how community activism and religious organizations can help build a more just and democratic future for all Americans

The Two-Dimensional Riemann Problem in Gas Dynamics

Jiequan Li,Tong. Zhang,Shuli Yang,2022-02-13 The Riemann problem is the most fundamental problem in the entire field of non linear hyperbolic conservation laws Since first posed and solved in 1860 great progress has been achieved in the one dimensional case However the two dimensional case is substantially different Although research interest in it has lasted more than a century it has yielded almost no analytical demonstration It remains a great challenge for mathematicians This volume presents work on the two dimensional Riemann problem carried out over the last 20 years by a Chinese group The authors explore four models scalar conservation laws compressible Euler equations zero pressure gas dynamics and pressure gradient equations They use the method of generalized characteristic analysis plus numerical experiments to demonstrate the elementary field interaction patterns of shocks rarefaction waves and slip lines They also discover a most interesting feature for zero pressure gas dynamics a new kind of elementary wave appearing in the interaction of slip lines a weighted Dirac delta shock of the density function The Two Dimensional Riemann Problem in Gas Dynamics establishes the rigorous mathematical theory of delta shocks and Mach reflection like patterns for zero pressure gas dynamics clarifies the boundaries of interaction of elementary waves demonstrates the interesting spatial interaction of slip lines and proposes a series of open problems With applications ranging from engineering to astrophysics and as the first book to examine the two dimensional Riemann problem this volume will prove fascinating to mathematicians and hold great interest for physicists and engineers
