more effective in some cases Are eco labels focusing on the main environmental policy targets or just on low hanging fruit Are eco labels really linked to other tools of IPP The Future of Eco labelling provides answers to all of these questions Based on a major EU research exercise the book plots a course for policy makers to address some of the historic problems with eco labelling to learn what works and what doesn't and to move forward with schemes that can make a real difference to sustainable production and consumption The book analyses the conditions under which eco labelling schemes both mandatory and voluntary are or can become an efficient and effective tool to achieve given objectives assesses previous experiences with eco labels in different European countries and the relationship of these schemes with business strategies IPP and market conditions defines strategies aimed at linking eco labels with other IPP measures explores how eco labels can be used to encourage sustainable consumption patterns create green markets foster innovation and development of green products and services and implement multi stakeholder initiatives and sets out detailed recommendations for the future of eco labelling The book will be required reading for policy makers businesses involved with eco labelling schemes and researchers interested in the development of sustainable production and consumption and IPP worldwide **Norway's**
